Early Vaccine Recipient Involved in the Vaccine Rollout Campaign Speaks Out – Reveals He Suffered Adverse Reaction – Exposes How Corporate America Colluded with the Government to Push Mandate

By Jim Hoft

Published December 22, 2022 at 4:00pm

Fearing for his children's safety, a former Emergency Services Manager of a fully integrated steel company who suffered an adverse reaction to the COVID vaccine has broken his silence.

"What made me decide to stand up and fight back after all of this? It wasn't my deteriorating health it was my children. My son has autism, and schools got to violate his services in the name of "COVID," he wrote.

Ryan Cunningham, who managed an emergency service department including an ambulance division, was one of the first people to get vaccinated before anyone else. He labeled himself as one of those "COVID Police."

He was involved in the marketing campaign that ultimately encouraged everyone to get vaccinated and he helped get early access to vaccination for the top executives and CEO of a Fortune 100 company.

According to Cunningham, he developed adverse reactions days after he received the Covid vaccine, along with six other healthcare at the time.

He also claimed that Corporate America colluded with the government to push the experimental Covid vaccine.

"This is why I left the propaganda machine. I'm ashamed I didn't realize sooner even with a M.S. in Emergency Management disaster preparedness. The government has and will violate civil liberties in the name of safety. PsyOps," he wrote.

"Even though I've been on the "right" side of the pandemic narrative for over two years, I wrestle with how many families were destroyed or broken up by the MSM and Gov narrative. I'm ashamed I was involved in that narrative in any way," he said.

Read his explosive expose below:

I got the COVID vaccine before most could as healthcare provider and emergency manager implementing many of the policies of the "covidians". Days after I was transported to the hospital with cardiac issue. Today I'm in heart failure.

1-2

From working out twice a day and lean to my heart jumping to 160 BPM sitting still. My endocrine system is now gone and my weight gain is 70+ pounds.

Here goes my story..... First, let me give you a bit of background. I have a Masters's Degree in Emergency Service Management. I happened to specifically study a pandemic and when the government would violate civil liberties in the name of safety.

In Corporate America, I worked as an Emergency Services Manager for a fully integrated steel plant. The same facility [Donald Trump] visited and helped re-open in 2018.

This is where it gets interesting... How are Government, Big Tech, and Corporate America connected as it relates to mandates? Many states have "fusion" or disaster response centers. These centers have a "business emergency operations" component to them for the private sector.

The goal of these fusion centers. Have liaisons with all the major businesses and keep them "in the know" with the actions of the government and get buy-into support initiatives. Seems harmless until COVID happened.

When the Government imposed many of the mandates, they KNEW they were mere "guidance," but if they could get big tech, major media, and Corporate America on board they could have these entities implement "administrative" or workplace policies.

How do I know... I was shamefully involved in the process. In my gut, it didn't feel right, but I made videos and marketing materials supporting others to get vaccinated. I interacted with these fusion centers, and I helped implement many of the initial mandates.

Because I had a healthcare provider license and was on the "team" I was one of the first to get vaccinated... and that's when it all took a turn for the worst. For those who judge today at the time, there were no horror stories. I was one of the first.

Days later, after my vaccine, my heart was beating out of my chest, and then I thought I was going to die. I didn't know where I was. I was saying my last prayers. At the time, I was in great shape, working out twice a day. Off to the hospital, I went.

Let's remember I managed an Emg Srvc department, including an ambulance division. When I got to the hospital I was told 6 other healthcare providers had a similar reaction to mine but all felt better after some time and I too felt better in a few hours.

At this time, only healthcare providers could get the vaccination.... not the general public. I thought I was going to be "OK" so I got a few days of rest and "shook it off."

All was not OK. As days went on, I would be sitting at a desk, and my resting HR would jump up to 140 – 160 BPM. I was not doing any physical activity. I was afraid to say anything because I didn't want to lose my job due to health issues. I ignored it.

1-3

"Everyone" wanted the vaccine at this time. I often wonder if the staggered rollout making the "health care providers" seem like they are elite to get it first was by design to create a "Fear of Missing Out" with the remaining population.

These "fusion centers" continued to push and work with Corporate America to push the vaccination and give them "elite access" to vaccination clinics. These centers include local, federal, and state law enforcement.

In fact, I was involved in the process of getting the CEO and senior executives of a Fortune 100 company early access to the vaccination. They flew to our location so they could get it because it wasn't available in other locations.

As time went on my health was getting worse... I was gaining weight at a rapid pace and I did not feel great. I live in the deep blue state of Illinois and the governor of my state has some of the most severe mandates. PS we're still in a disaster declaration.

What made me decide to stand up and fight back after all of this? It wasn't my deteriorating health it was my children. My son has autism and schools got to violate his services in the name of "COVID"

From a Beach in Florida, I started a local non-profit, Speak for Students. To goal was to advocate for kids and to stop the mandates. It was from this initiative I met [Thomas DeVore] and [John Ruhlin]. I still ignored my condition.

That's what I did... I fought for my children and other's children to ensure they could have the free choice to mask or not mask, to vaccinate or not vaccinate. I helped my local county board pass a "mask and vaccine choice" resolution. I still ignored my condition.

After our success, JB Pritzker decided to put the mandates back in play at the request of the [Chicago Teachers Union] and others. I wasn't having it... I saw how his emergency management staff was colluding with schools, local health departments, and Corporate America.

By this time, the company I worked for had shifted their messaging from the #BestofBoth to the #BestforAll because they wanted to close the facility that [Donald Trump] helped re-open. Why? Because "Steel Making" is not "Green," and sacrificed PEOPLE for PROFITS.

NBA Legend Claims 'Thousands' of Athletes Died From COVID Shot

by Jamie White

January 1, 2023

"It's a big number," says former Utah Jazz player John Stockton.

Former NBA player John Stockton claimed he knows "hundreds" if not "thousands" of professional athletes who have died as a result of taking the experimental COVID-19 injection.

Stockton, former point guard for the Utah Jazz, joined the "Sideline Sanity" podcast for an interview last month to revise an earlier claim he made that over a hundred professional athletes had "dropped dead" due to the vaccine.

"I think it's pretty much on record, there's 150, I think it's now over 100 professional athletes dead. Professional athletes, in the prime of their life, dropping dead vaccinated, right on the field of play, right on the field, right on the court," Stockton had said last year.

Now, Stockton doubled down on his claim and even expanded it, claiming he now believes "thousands" of athletes have been killed by the jab.

"I went back and looked; I have names, pictures, faces, where they played," Stockton told host Michele Tafoya. "I had over 300 at the time, so I felt pretty confident with my 150, and again people had to come out and discuss it. I had the proof in my hands - a piece of paper with the names on it."

"Now it's a lot more than that," he continued. "I think it's thousands now, but don't quote me. I'm not saying it's 1,000 or more, but it might be. It's a big number."

Stockton had previously criticized the vaccine manufacturers for their history of covering up their medical "fraud."

"It's amazing the protection they have, and even with that, they are serial felons," Stockton said of the pharmaceutical companies in 2021. "Almost each one across the board, they've been convicted and paid

astronomical sums for the frauds they've committed and yet it doesn't seem like it's known."

The 60-year-old had also thrown his support behind Brooklyn Nets player Kyrie Irving after he refused to adhere to the NBA's vaccine mandate.

"You have a lot of supporters, Kyrie," Stockton told fellow vaccine skeptic podcast hosts Chad Fisher and Tony Farmer. "Not all them of can get to you, and you can't get to all of them, but there's every bit a majority out there that's sitting there pulling for you. They're just not quite as bold as he is. I'm proud of him as an individual to take that kind of individual risk and be that bold for what you feel is right."

Since the COVID vaccine rollout in 2021, many athletes, pilots, and members of the military who were all subjected to vaccine mandates have been revealing the extent of the adverse reactions they suffered after taking the shot.

Heart inflammation has become so common in vaccinated athletes that they're now being screened for COVID vaccine adverse reactions in many cases.

Nevertheless, incidents of otherwise healthy individuals who died suddenly has apparently spiked over the last couple years.

Check out Stockton's interviews with DNP-CD Sports:

16-Year-Old Basketball Player Suffers Stroke While in School

By Jim Hoft

Published January 11, 2023

On Tuesday night, a 16-year-old Odessa-Montour girls' hoops standout suffered a stroke while in school.

Keyonna Garrison, an Odessa-Montour junior, had a stroke on January 5 and was hospitalized at Strong Memorial Hospital in Rochester after being treated at Guthrie Corning Hospital, Star Gazette reported.

According to a fundraising campaign created to help the family with medical expenses, Garrison had a blocked vertebral artery, causing her to have a stroke.

3-2

She had been in the intensive care unit (ICU) for quite some time, but after undergoing numerous tests and treatments, she was finally removed.

“Keyonna is still undergoing neurological tests to find a path forward and to repair the issue as well as physical therapy to recover motor skills. She is on the road to recovery but it will be a long and emotional journey,” an entry in the fundraising campaign reads.

Star Gazette reported:

Keyonna, 16, was discharged from Strong on Tuesday night, coach Gavich said. Her Grizzlies teammates fell by a 54-34 score to Edison earlier in the evening in Elmira Heights to drop to 6-4.

Before the national anthem, those in the gym responded to a request from Edison athletic director/dean of students Mike Bennett with an extended ovation in support of Garrison. Gavich said later Garrison received encouraging news Tuesday when she learned surgery won't be required to repair a damaged blood vessel.

As of late Tuesday night, the GoFundMe for Keyonna had raised more than \$14,000. Edison's girls basketball program presented a donation envelope to Gavich.

“They're still hopeful for a full recovery and she's back playing sports as a senior,” Gavich said. “That's as good as we can hope for.”

Garrison became ill during gym class Thursday morning. Gina Gavich, Greg's daughter, noticed her on the gymnasium floor and thought Garrison possibly twisted an ankle. She told her father and Greg immediately went to check on her. He received no response from Garrison as nurses treated her.

According to her GoFundMe page, Garrison will undergo physical therapy to improve her motor skills. There was no impact to her cognitive skills, Greg said.

Mother Blames Covid Vaccine and Government After Son Develops Blood Clots in His Brain 9 Days Following Vaccine – Son Now Has More Clots and a Damaged Heart

By **Jim Hoft**

Published January 10, 2023

A mother in Draper, Utah broke her silence and revealed that her healthy son developed blood clots in his brain nine days after receiving the first dose of the experimental mRNA Covid vaccine. Nearly a year later, another blood clot formed in his right leg and moved to his lungs.

Cherie Romney revealed that her son, Everest Romney, was taken to the ICU with blood clots in his brain back in April 2021, 9 days after receiving the COVID vaccine. Medical records state that the blood clots were an “adverse reaction to the vaccine.”

Everest, 18, stands 6’9” and was a basketball player for Corner Canyon High School prior to the incident.

“You all know someone this happened to (my son) It’s not as rare as people think. It is true [and] it is not misinformation. Happy to share his medical records with anyone who wants to see for themselves,” Mrs. Romney wrote.

“[The vaccine] has altered his life path forever. He is lucky to be alive today but his life will never be the same. In 2021, everyone who talked about this had their social media pages frozen. We need truth in reporting these events. It is not rare & it happened to us,” she continued.

Everest Romney felt his neck was swelling. In the following days, he suffered from severe headaches.

4-2

Mrs. Romney told **ABC4** that the pediatrician first blamed a torn neck muscle for her child's symptoms, despite her insistence that it was something more serious.

Mrs. Romney said that if she had listened and followed the doctors' advice, her son "would not be alive today."

"If I had kept quiet and listened to the [doctors] at first, Everest would not be alive today. While they admit now that they were wrong in the beginning, the resistance to even checking him for the blood clots was immense. Had we not persevered against them, there would be a very different ending to this story," she said.

On Tuesday, January 3, 2023, Mrs. Romney gave an update about Everest.

She said that Everest had developed another blood clot in a deep vein in his right leg, and doctors had confirmed that his heart was still damaged due to the vaccine.

"Just left the Emergency Room TODAY. Everest has another blood clot, a deep vein in his right leg & they have confirmed his heart is still damaged. Referral to a cardiologist – more to come about his heart as it seems the damage from the inflammation may be permanent. Never mind the [effects] of the traumatic brain injury he still deals with on a daily basis," Mrs. Romney wrote.

Mrs. Romney went on to blame the mRNA Covid vaccine and the Biden administration for suppressing information about the vaccine's risks.

"Thanks Covid vaccine, thanks to the US government. My former 6'9" basketball player is no longer a basketball player and he is back on blood thinners starting tonight. So glad I was doing "the right thing" and protecting him from Covid, bummer that the lies about that have altered his life forever and almost killed him. Covid never even made him sick," she said.

4-3

Everest just left the emergency room after a follow-up check-up.

4-4

On Thursday, January 5, 2023, Everest was back at St Mark's Hospital and he was admitted for the night for observation.

Mrs. Romney gave another sad update. She said Everest's deep vein thrombosis had moved to his lungs.

"He is at St Mark's Hospital tonight, with multiple pulmonary emboli. Tomorrow – hematologist & cardiologist. Hopefully home soon," Mrs. Romney wrote.

According to Mrs. Romney, doctors don't know how to stop the effects caused by the vaccine.

"We know the cause, it's just that the Covid vaccine is such an unknown that the [doctors] don't know how to stop the [effects] once they've put everything in motion. It's more about managing the symptoms because the damage can't be undone," she responded in one of her posts.

Mrs. Romney described her son as a tough kid and a good man.

2-Year-Old Child Dies Suddenly One Day After Receiving Both the COVID Vaccine and Annual Flu Vaccine

By Jim Hoft
January 16, 2023

A 2-year-old child died suddenly after receiving both the Covid vaccine and the annual flu vaccine, according to the Vaccine Adverse Event Reporting System (VAERS), a national early warning system to detect possible safety problems in US-licensed vaccines, which is co-managed by the CDC and FDA.

According to the data from the CDC's VAERS WONDER System, a two-year-old girl from New Hampshire died suddenly one day after receiving one dose of the Moderna vaccine and FluLaval Quadrivalent vaccine.

Details for VAERS ID: 2536846-1

Unknown	Unknown,Unknown

Note: Submitting a report to VAERS does not mean that healthcare personnel or the vaccine caused or contributed to the adverse event (possible side effect).

5-2

The young child was vaccinated on December 15 with the Covid and flu vaccines.

She died the next day, December 16, 2022.

The child was not hospitalized, as was shown in the report, suggesting that the event occurred suddenly.

An online obituary published by Brookside Chapel & Funeral Home in Plaistow, New Hampshire, matches the details posted on the VAERS website.

The Gateway Pundit reached out to the parents earlier this month on their Facebook accounts, but they did not respond to our request for comments.

The two accounts are no longer searchable and can't be reached through Messenger.

The death announcement that was previously published by Brookside Chapel & Funeral Home has also been taken down.

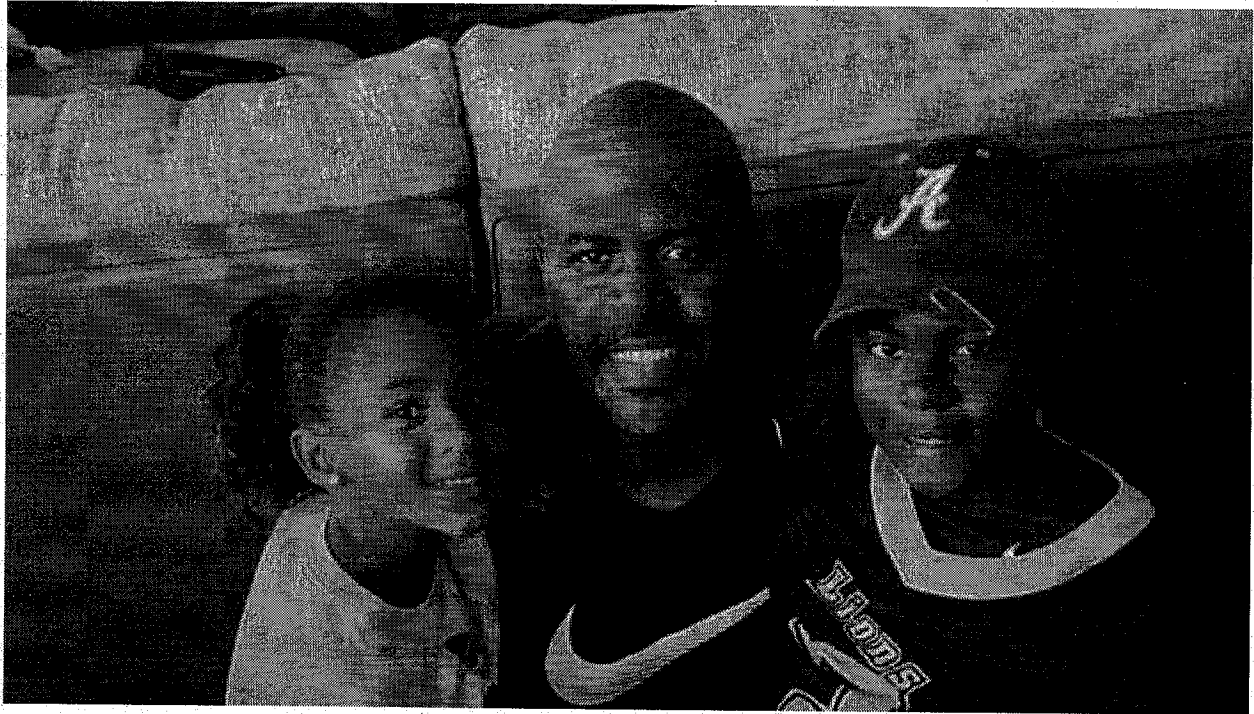

To respect the family's privacy, The Gateway Pundit has decided not to publish the child's name.

Former Alabama Crimson Tide Running Back Ahmaad Galloway Dies Suddenly At Age 42

By Cullen Linebarger

Published January 15, 2023

Alabama football nation and Compton-Drew Middle School in St. Louis, Missouri went into mourning with the sudden passing of former Crimson Tide football star Ahmaad Galloway last Monday. Galloway was just 42 years old and a teacher at the middle school.

Here is the tragic story from WVTM 13 News:

The eighth graders at Compton-Drew Middle School in St. Louis, Missouri are in mourning today. They have shut the door of a popular teacher's classroom. It's out of respect for their English teacher, a teacher they loved so much.

Former Bama running back Ahmaad Galloway has died. School principal Susan Reid says that Galloway, an eighth-grade English

6-2

teacher, was found dead on Monday at his St. Louis apartment during a welfare check.

"Ahmaad was always on time, very responsible, so we knew something might be wrong," Reid said. "There wasn't anything disrupted at Ahmaad's apartment, so we are thinking that it could have been a medical issue."

Galloway was a quiet, humble man who let his talking take place on the football field. A bruising running back out of Millington, Tennessee, Galloway played for the Crimson Tide from 1999 to 2002.

"Ahmaad was always quiet and humble," his sister Kimberly Slaughter tells me. "My brother loved football growing up and later loved his children Austin and Aubrey."

An official cause of death may not be known for a few days. "The medical examiner is working to find out how Ahmaad died," school principal Reid says from St. Louis. "The family is coming together from different parts of the country before deciding on funeral arrangements."

Galloway's eighth-grade students are gathering today through tears to honor their first-year teacher. While they will keep Galloway's class door shut out of respect, they will make signs and banners, hoping that doing so helps ease their pain. The school crisis team has sprung into action. Students at Compton-Drewe ILC Middle School are receiving counseling.

Before moving into the teaching profession, Galloway enjoyed a stellar career at the University of Alabama. He ended up rushing for 1,830 yards and seventeen touchdowns during his four years at the Capstone.

The Denver Broncos selected Galloway in the seventh round of the 2003 NFL Draft, but sadly he never played a down in the league. He

6-3

was traded to the San Diego Chargers (now the Los Angeles Chargers) after 2003 season and was released by the team one year later.

Galloway did enjoy a brief playing tenure in now-defunct NFL Europe before his professional football career concluded, however.

He played for both the Scottish Claymores and the Frankfurt Galaxy in 2003 and 2004, respectively. It's important to note the NFL and NFL Europe played their seasons at different times.

Galloway's life may have been cut too short, but it was still a life well-lived and full of accomplishments. Roll Tide forever, Ahmaad.

Woman with No History of Heart Issues Dies Suddenly of Cardiac Arrest, Friend Calls on Community for Help

By Lorri Wickenhauser January 17, 2023 at 1:56pm

A Las Vegas woman has started a fundraising campaign for the family of a friend who died suddenly Jan. 8.

Michele Morgan told KLAS-TV that her friend, Alicia Groeblichhoff, went into cardiac arrest while working out at a gym.

Groeblichhoff, died the next day. She was 46, according to her obituary.

Morgan told KLAS her friend had no history of heart problems before she “suddenly, without warning, collapsed at the gym and suffered a massive cardiac arrest.”

Morgan has set up a GoFundMe to raise funds to help pay Groeblichhoff’s medical bills, which she said “are going to be astronomical” because she had to be transported to the hospital and placed on life support.

The bills are going to be “more than the family can handle,” she wrote.

Groeblichhoff had two children, 15 and 9, and the financial assistance will also help with their college, Morgan said.

As of Tuesday afternoon, the fundraiser had taken in about \$38,000 toward its goal of \$250,000.

Morgan described Groeblichhoff as “my friend and business partner for 30 years.”

“She was such an amazing soul, with a contagious smile, and kindness that we do not see every day,” she wrote on GoFundMe. “Everyone who was fortunate enough to have their path come in contact with Alicia’s, immediately loved her.”

KLAS reported that Groeblichhoff was one of several seemingly healthy people who have died suddenly of apparent heart issues in recent weeks.

During the week before her death, two Las Vegas-area teens also died suddenly.

7-2

Jordan Brister was pronounced dead after collapsing in a school restroom Jan. 3.

A GoFundMe appeal created Jan. 7 said, “Jordan Tyler Brister suddenly and unexpectedly suffered cardiac arrest while at school with no explanation as to why. Jordan was a senior in high school who planned to join the military after graduating.”

Another Las Vegas teen, 16-year-old Ashari Hughes, died suddenly Jan. 5 after suffering a “medical emergency” while playing in a flag football game.

The Clark County Coroner later ruled Hughes’ death was due to a congenital heart defect related to an “anomalous origin of the right coronary artery from left coronary sinus of Valsalva,” KLAS reported.

The news station interviewed a local cardiologist who advised people, “no matter your age or health,” to get checked for congenital defects, coronary artery disease, electrical problems or “issues related to COVID-19.”

Second High School Student Dies Suddenly Within a Week in Las Vegas After Suffering from Cardiac Arrest

By Jim Hoft

Published January 11, 2023

Jordan Brister was a senior in high school who planned to join the military after graduating. (Source: Savanna Brister)

A senior high school student at Amplus Academy in Las Vegas was found unresponsive in the school bathroom last week after suffering cardiac arrest for unknown reasons, according to his family.

Jordan Brister, 18, passed away on Sunday “suddenly and unexpectedly” after suffering a cardiac arrest on January 3 after gym class “with no explanation as to why,” according to a fundraising campaign.

According to Brister’s father, Conrad Brister, it may took 25 minutes before he was found. He added, that during that time, Jordan’s heart stopped.

8-2

In a statement, the public charter school stated its personnel rendered "immediate medical assistance" to Brister until paramedics arrived.

Jordan was admitted in ICU at Southern Hills Hospital and was pronounced dead on Sunday.

"It is with deep sadness and sympathy that we announce the passing of one of our Senior High School students, Jordan Brister," Amplus Academy wrote on its Facebook page.

"The Amplus community sends our love and condolences to the Brister family as well as to all of Jordan's family, friends and acquaintances," the post continued.

The Clark County Coroner's Office told KSNV that they are still looking into the exact cause of Jordan's death.

Tributes poured in following the news of Jordan's passing.

Jordan Brister's death comes after another high school student died in Las Vegas within a week.

On Thursday night, a sophomore high school student in Las Vegas, Nevada, died suddenly while playing flag football.

Ashari Hughes, a 16-year-old player for Desert Oasis High School, collapsed suddenly after the team's home game against Valley High School on Thursday night because of a "medical emergency."

The Clark County Coroner's office has not yet released Hughes' cause of death.

Young Priest “My Heart Issues Began When I Got Vaccinated”

By Margaret Flavin

Published January 15, 2023

In a 25-minute video, Father Edward Looney detailed his 23 month journey with tachycardia since being vaccinated.

“I thank you for joining me this evening and I meant to do this yesterday, Friday, the day after I got released but just in the time of day and such and it just never worked out.....then today I had a wedding evening Mass. Thanks to Father Tony, he took up my other Mass so I didn't have to do three Masses back to back but could have a little break in between. He's in, though, his high 80's and he had a Mass on Washington Island so it was a long day for him.”

“He said, ‘You're one of our young guys. You shouldn't be having heart problems right now so we need to take care of you so you can keep working.’”

“So I just want to share a little bit... a lot of people know that I was in the hospital on Thursday and then I was there for about 14 hours. I went in to the emergency room at four o'clock, no...it was at 2:30 that I called somebody and then they came and they picked me up and they took me to the emergency room in Green Bay and then I was admitted....”

“You know sometimes you feel like you can't speak because of...because of...whatever reasons...but I think it's important to share what's been going on...so I want to maybe go back to February 2021...it was highly encouraged that we get the Covid vaccine.

“And in fact, hospitals told us if we were not vaccinate we would not be able to visit people in the hospitals. We were told we couldn't go to nursing homes if we didn't get vaccinate. If we didn't get vaccinated,

9-2

there...there...where it almost seemed like, for the sake of your job...and you see this today on job resumes and applications....”

“So really, the vaccinations were pushed on us.”

“It was February, I was in the first wave of people to get the Covid vaccine...and actually, that very first shot, I didn’t have an immediate reaction.”

“I get home and I realize my heart rate was higher than it normally was....that it was about 110, 115 beats per minute. I was really tired as a result of it.”

Father Looney goes on to share that subsequently, his symptoms worsened.

Watch the full video below.

According to his website:

Fr. Edward Looney was ordained a priest for the Diocese of Green Bay June 6, 2015, and currently serves as Pastor of St. Francis and St. Mary Parish, Brussels and St. Peter/St. Hubert Parish, Lincoln/Rosiere.

ABC News Journalist Breaks Her Silence, Reveals She Developed Heart Condition Due to Covid Vaccine

By **Jim Hoft**

Published December 22, 2022

A reporter for ABC News Australia has broken her silence after suffering a heart condition following receiving the COVID vaccination.

Eleni Roussos, a journalist in the Darwin ABC newsroom and also the presenter of ABC's flagship 7 PM News in the Northern Territory, revealed that she developed pericarditis after receiving her first dose of Pfizer Covid vaccine, describing it as "a living hell."

Koulla Roussos, Eleni's sister, posted on Facebook last year to explain that Eleni had been hospitalized and diagnosed with pericarditis (inflammation of the outer lining of the heart) and hence was unable to attend the NT Media awards ceremony.

 **Koulla Roussos**
November 6, 2021 · 🌐

My sister and ABC journalist and news anchor Eleni Roussos did not attend the NT Media awards ceremony tonight.

She was in hospital last night diagnosed with pericarditis (clinically), an inflammation of the outer lining of the heart, an adverse reaction to her first Pfizer jab. She was released after tests, but her situation hasn't improved and is heading back to ED.

 Visit the COVID-19 Information Center for vaccine resources.

10-2

Eleni Roussos said that former AMA President Kerryn Phelps' decision to go public with her own personal suffering had encouraged her to do the same.

"Inspired by [Dr. Kerryn Phelps] today I want to say I too have been in a living hell with pericarditis because of the Covid vaccine," Roussos wrote on her Twitter account.

"Vaccine injuries are real and serious and I sincerely hope more people will speak up," she continued.

Dr. Phelps responded to Roussos' tweet, "I hoped my submission to the parliamentary inquiry would spark the conversations we need to have about long covid and vaccine injury. I hope we can find answers leading to recovery for you and others."

The Gateway Pundit previously reported former Australian Medical Association President Dr. Kerryn Phelps has finally broken her silence about the "devastating" side effects she and her wife experienced after receiving the Covid vaccine. She criticized regulators for their attempts to control the public by threatening the doctors.

Professor Kerryn Phelps was an outspoken advocate of mass Covid vaccinations for both adults and kids.

She said the true number of adverse events is much greater than reported, citing underreporting and "threats" from medical authorities.

She pleaded for an Australian parliamentary committee to examine dangers of the mRNA vaccines on Monday. Their risks go far beyond their known dangers of myocarditis, and both she and her wife personally suffered long-term side effects following their Pfizer jabs, she said.

17-Year-Old High School Student in Ohio Dies Suddenly From “Cardiac Arrest” While at School

By **Jim Hoft**

Published January 10, 2023

Blaze Jacobs (Source: Becky Payne Jacobs/Facebook)

On Monday, a junior male student at Western Brown Local Schools died suddenly from “cardiac arrest.”

Blaze Jacobs, 17, suffered a medical emergency on Monday morning while at school.

A **GoFundMe page** said that Jacobs was rushed to Cincinnati Children’s Hospital and given CPR for more than an hour, but despite their best efforts, the medical personnel were unable to save his life.

He was pronounced dead later on.

11-2

Western Brown High School Principal Heather Cooper issued a statement following the tragic incident to district families.

"Blaze Jacobs, a junior in our building, had cardiac arrest activity and was transported to Children's Hospital this morning. We have received the information that Blaze has passed away," Mrs. Cooper said in a statement.

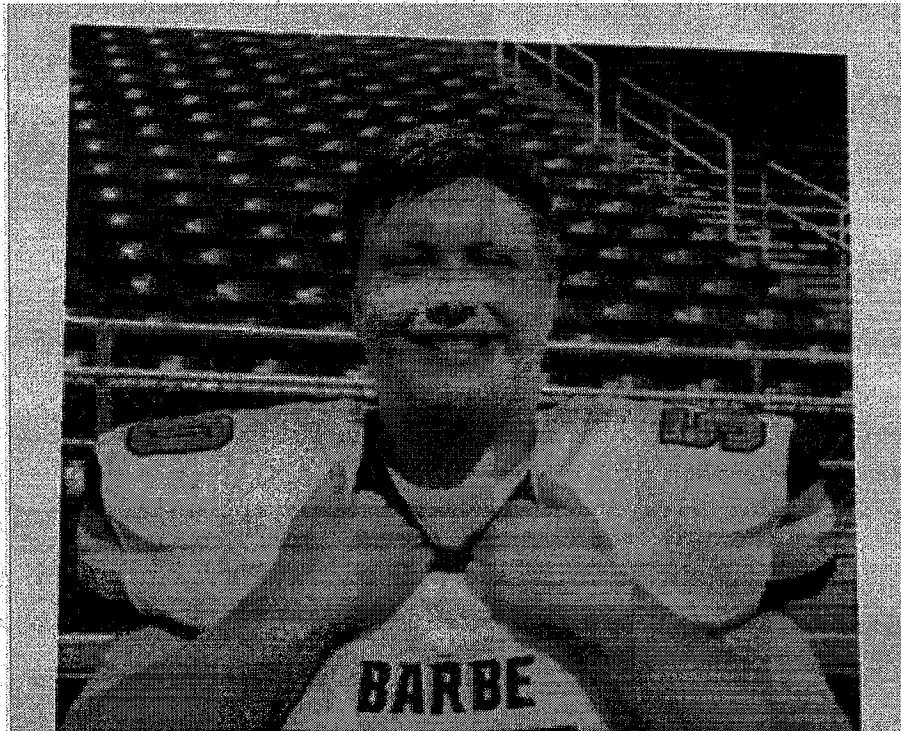

"Again, we have started hearing questions and rumors in the building and wanted to make sure we were giving the most accurate and important information that we have, so our staff is communicating this with our students. Blaze was a very large part of our school community and one of WB's biggest fans so we know this is going to be a struggle for everyone in our school family," she continued.

Air Force Academy Offensive Lineman and Cadet Hunter Brown Dies Suddenly While Walking to Class

By Jim Hoft

Published January 10, 2023

Offensive lineman for the Air Force Academy football team Hunter Brown died suddenly this week when he left his dormitory to go to class.

The Air Force Academy is an NCAA Division 1 school.

Hunter, from Louisiana, experienced a medical emergency when he left his dorm for class.

Our prayers are with him and his family.

The US Military had a forced COVID vaccine policy until December.

The Air Force put out a statement earlier this week.

12-2

Team USAFA,

It saddens me to inform you that we lost one of our cadets yesterday. On Monday morning, Cadet Third Class Hunter Brown of Cadet Squadron 16, experienced a medical emergency while leaving his dormitory for class. Academy first responders were immediately called and attempted life saving measures, but they were ultimately unsuccessful.

Hunter was a standout offensive lineman on the Falcon football team and was well-respected in his squadron. The entire Air Force Academy mourns his loss, and our hearts and condolences are with his family, his squadron, and all who were touched by this incredible young man.

At moments like this, it's natural to experience grief and other strong emotions. Multiple helping agencies, like the Peak Performance Center (PPC), mental health, chaplains, Military and Family Life Counseling (MFLC), and others, are available to anyone who needs them. This is a difficult time for all of us, so please keep an eye on one another as we mourn this loss together.

V/R Rich Clark

RICHARD M. CLARK, Lt Gen, USAF
Superintendent, U.S. Air Force Academy

Hunter Brown went to Barbe High School in Louisiana. He signed his letter of intent to play at the Air Force Academy back in 2019.

24-Year-Old Flight Attendant at Air Albania Collapses and Dies Suddenly from Heart Attack Shortly After Landing in London

By Jim Hoft

Published December 30, 2022

A member of the Air Albania cabin crew collapsed and died suddenly last week following a heart attack on a flight from Tirana, Albania to London.

13-2

According to the airline, Greta Dyrmishi, who was 24 years old, died suddenly on Wednesday, December 21, due to a heart attack shortly after landing at Stansted Airport in London, England.

"On December 21, after we disembarked all the passengers of the flight to London, one of the members of the cabin crew, Greta Dyrmishi, suffered a heart attack," Air Albania said in a statement.

"Even after all the medical assistance offered at the moment, we still lost him. Air Albania has contacted her family from the first moments and we continue to be by their side in these difficult moments."

"Out of respect for Greta and her family, we decided to share the news with the public at the most appropriate moment. We will always remember Greta as a passionate professional, an excellent colleague and a very good friend to all of us."

"With the belief that today she is among the mercy of God, Air Albania will continue to stand by her family," the post concluded.

Following reports that a woman was in critical condition, the East of England Ambulance Service NHS Trust confirmed that a total of six emergency vehicles were dispatched to the scene: two ambulances, a hazardous area response team vehicle, an ambulance officer vehicle, and the Essex and Herts Air Ambulance. Officers from the Essex Police Department were also present, Bishop Stortford **reported**.

"The Indie was told the aircraft touched down at around 1 pm as scheduled and after efforts to save her life at Stansted, the ambulance service took Ms Dyrmishi to Princess Alexandra Hospital in Harlow," the outlet added.

“Covid 3 Times After the Vaccine – I Should Be Happy, Haven’t Had a Stroke Yet” – Pro Golfer Hank Haney Discusses the Covid Vaccine and His Continued Illness

By **Jim Hoft**
January 17, 2023

Professional golfer Hank Haney tweeted out an update on his health on Saturday.

Haney says he has been nothing but sick since taking the COVID shot. He then added that he should be happy because, “Haven’t had a stroke yet!”

That’s where we are as a society after two years of forced vaccines.

It appears the vaccines were a complete failure.

Haney then added this tweet on the lies being pushed by those supporting the failed experimental vaccines.

14-2

Hanky Haney is not alone. There are over a million incident reports recorded since the vaccine mandates were forced on the American public. Tens of thousands of Americans have died.

Cardiologist Dr. McCullough On Damar Hamlin: 'Leading Concern Here Is Vaccine-Induced Myocarditis'

by Kelen McBreen

January 4, 2023

'The FDA says the vaccines cause myocarditis and heart damage,' the doctor added.

The tragic on-field collapse of NFL player Damar Hamlin may have been caused by the COVID-19 shot, Dr. Peter McCullough revealed in a recent interview.

During Tuesday's broadcast of *Fox News*' "Tucker Carlson Tonight," the top cardiologist explained NFL athletes like Hamlin are regularly screened for underlying heart issues.

He continued to say that after watching the play that took place just moments before Hamlin collapsed, "it looked like a primary cardiac arrest."

Cardiologist Dr. Peter McCullough discusses his findings with Tucker Carlson on the disturbing trend of more young athletes collapsing on the field with heart issues than ever before.

"The leading concern here is vaccine-induced myocarditis, if indeed he's taken the vaccine." pic.twitter.com/MILxJgeciy

— Scott Morefield (@SKMorefield) **January 4, 2023**

Dr. McCullough commended the work of the medical staff tending to Hamlin on the field and optimistically suggested Hamlin "can have neurological recovery" thanks to their help.

Getting to what may have caused the incident, Dr. McCullough noted the leading concern is "vaccine-induced myocarditis, if indeed he's taken the vaccine."

He also said the doctors working on Hamlin "have a public health obligation to tell us if he's taken the vaccine."

15-2

Later, Dr. McCullough told Tucker, "The FDA says the vaccines cause myocarditis and heart damage. Autopsy studies show it can be and is fatal. The same is true for blood clots and neurologic damage. Our agencies should be protecting the health of Americans and safety is job one. I'm disappointed that they're minimizing it."

On Twitter, Dr. McCullough posted an image from **a recent paper** showing a sharp increase in deadly cardiac arrests in athletes since January 2021.

This recent paper from Dr. Polykretis and myself gets the sharp rise in athlete deaths into PUBMED. Since vaccination, "1598 athletes suffered cardiac arrest, 1101 of which with deadly outcome. Over a prior 38-years (1966-2004), 1101 athletes < age of 35 died (~29/yr). <https://t.co/IGWFctLx2L> <pic.twitter.com/SCieZTsoNZ>

— Peter A. McCullough, MD, MPH™ (@P_McCulloughMD) **January 3, 2023**

Time will tell what the official word from doctors is regarding this tragic story.

16-1

Multiple Young Athletes And Former Athletes Died Suddenly This Past Month

JAN 15, 2023

Former Alabama Broncos star running back Ahmaad Galloway died suddenly this week at age 42. Galloway was an eighth-grade English teacher at Compton-Drew Middle School in St. Louis, Missouri. When Galloway did not show up for work, the school contacted authorities. Police conducted a welfare check and found the former football star dead in his apartment. The cause of death has not yet been made public.

Compton-Drew Middle School Principal Susan Reid said she knew something wasn't right.

"Ahmaad was always on time, very responsible, so we knew something might be wrong," Reid told WVTM 13. "There wasn't anything disrupted at Ahmaad's apartment, so we are thinking that it could have been a medical issue."

His passing is just one among a flurry of sudden fatalities in the past year among athletes and former athletes in particular, occurring at relatively young ages. In the majority of deaths, heart failure or circulatory failure is found to be the culprit.

Jordan Brister, 18, died Sunday, Jan. 8, after suffering a cardiac arrest on Jan. 3 during the school day at Amplus Academy in Las Vegas, according to a statement by the school shared by NBC affiliate KSNV. He was found unresponsive in the school bathroom after attending gym class, his family told KSNV.

According to local reports from Campbell County, 17-year-old Max Sorenson died of a "medical event" at his home Monday, December 26. Campbell County Coroner Paul Wallem said that following the medical incident at his home, the high school basketball player was rushed to the Campbell County Memorial Hospital in Gillette, Wyoming.

However, despite efforts from the doctors, he was pronounced deceased.

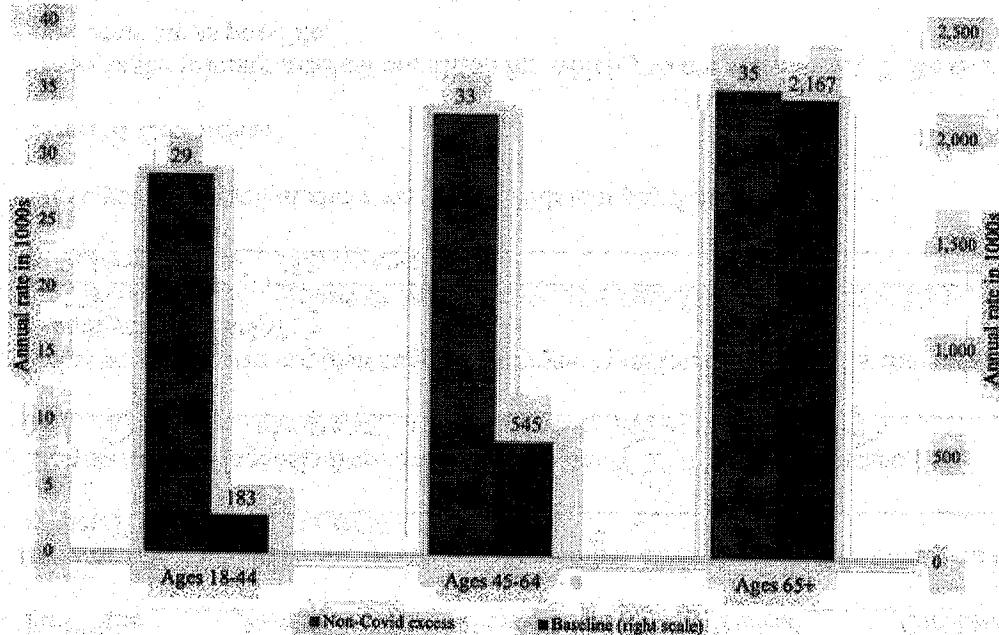

Mixed Martial Arts (MMA) fighter Victoria 'The Prodigy' Lee has tragically died last week at just 18 years old, of a medical condition which has not yet been revealed to the public.

A 16-year-old girl in Las Vegas has died after "suffering a medical episode during an athletic event according to a message sent to families," reported KSNV, the NBC affiliate in Las Vegas. The student has been identified as 16-year-old Ashari Hughes. The medical emergency occurred Jan. 5 during a flag football game, according to The Las Vegas Review-Journal. The newspaper also reported that Hughes collapsed during her team's home game against Valley High School. She was taken to the hospital and died later that night.

The list goes on and on.

16-2

Excess deaths have jumped dramatically in the US (excess deaths being fatalities beyond the yearly average). **The majority of excess deaths in the past two years involving people under the age of 65 were not caused by Covid infection.** At least 32,000 excess deaths in 2021 have been directly attributed to heart failure and circulation related failures. Circulatory deaths were a major contributor to additional deaths among ages 18 to 44.

The UK has released information indicating a similar spike in excess deaths last year - **The highest in 50 years, in fact.** UK officials of course deny any connection to vaccine side effects (an often cited concern by the public), and instead claim that heart failure may be the after-effect of covid infection. However, multiple reports and studies show that the covid virus causes no significant damage to the heart and is not a contributor to heart failure, despite rumors spread within the mainstream media.

For example, In March 2021, a group of sports cardiologists reported on nearly 800 professional athletes who had tested positive for Covid-19. Less than 1% of these athletes had abnormal findings on cardiac magnetic resonance scans or stress echocardiography. None of these athletes had cardiovascular trouble when they returned to play.

This means that there is some other cause besides covid which just happens to have started in 2021. Studies do show a direct link between covid vaccination and Myocarditis. This would help to explain the jump in non-covid excess deaths related to heart failure since 2021, but since most studies investigating vaccination side effects do not use unvaccinated people as a control group, there is no hard data on vaccinated versus unvaccinated negative events.

17-1

Kirsch: Celine Dion Was Disabled From a KNOWN SIDE EFFECT of the COVID Vaccine (99.6% Certainty)

by Steve Kirsch | [Substack.com](https://www.substack.com)

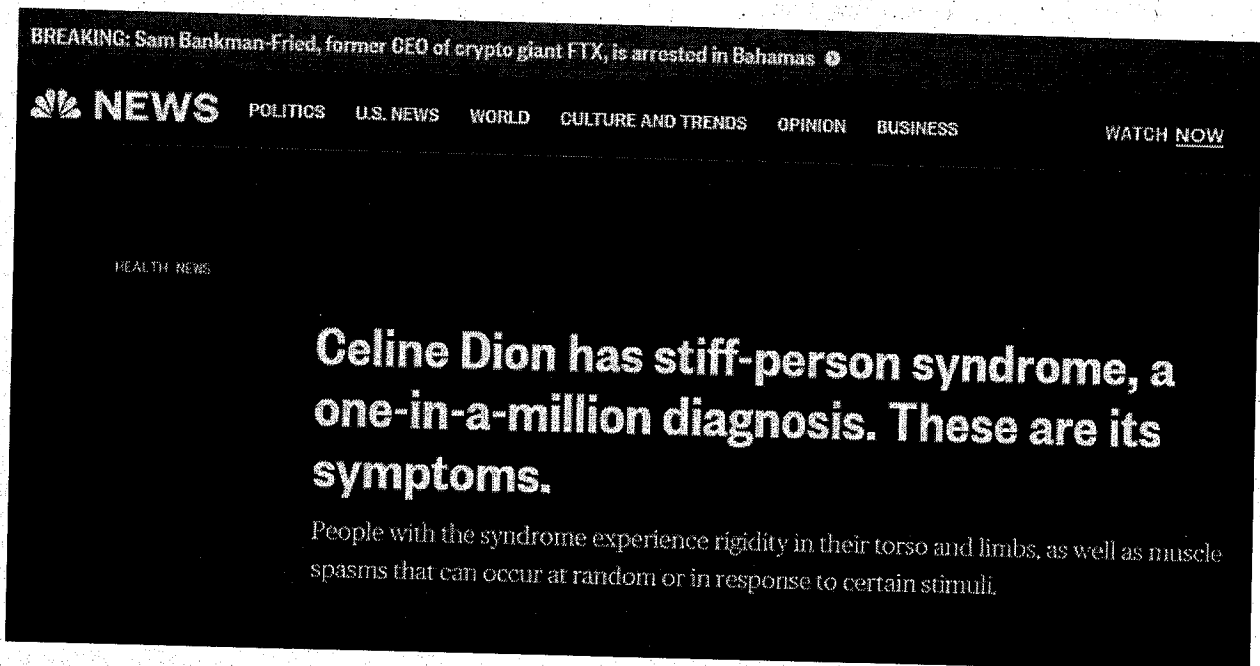

December 20, 2022

US government data shows it is 99.6% likely that Celine Dion got her Stiff Person Syndrome from the COVID vaccine. She can't sue because of the liability protection.

Celine Dion finally revealed she has stiff person syndrome, which is so rare, it's only found in 1 in a million people. Did she just get unlucky? Nope. She got vaccinated.

My calculations, shown below, estimate that there is 99.6% chance it was the COVID vaccine which caused her injury.

If there is any respected medical authority who thinks I'm wrong and wants to challenge me on the evidence and arguments I present below, use the [Contact Me form](#) and we'll set up a recorded video call.

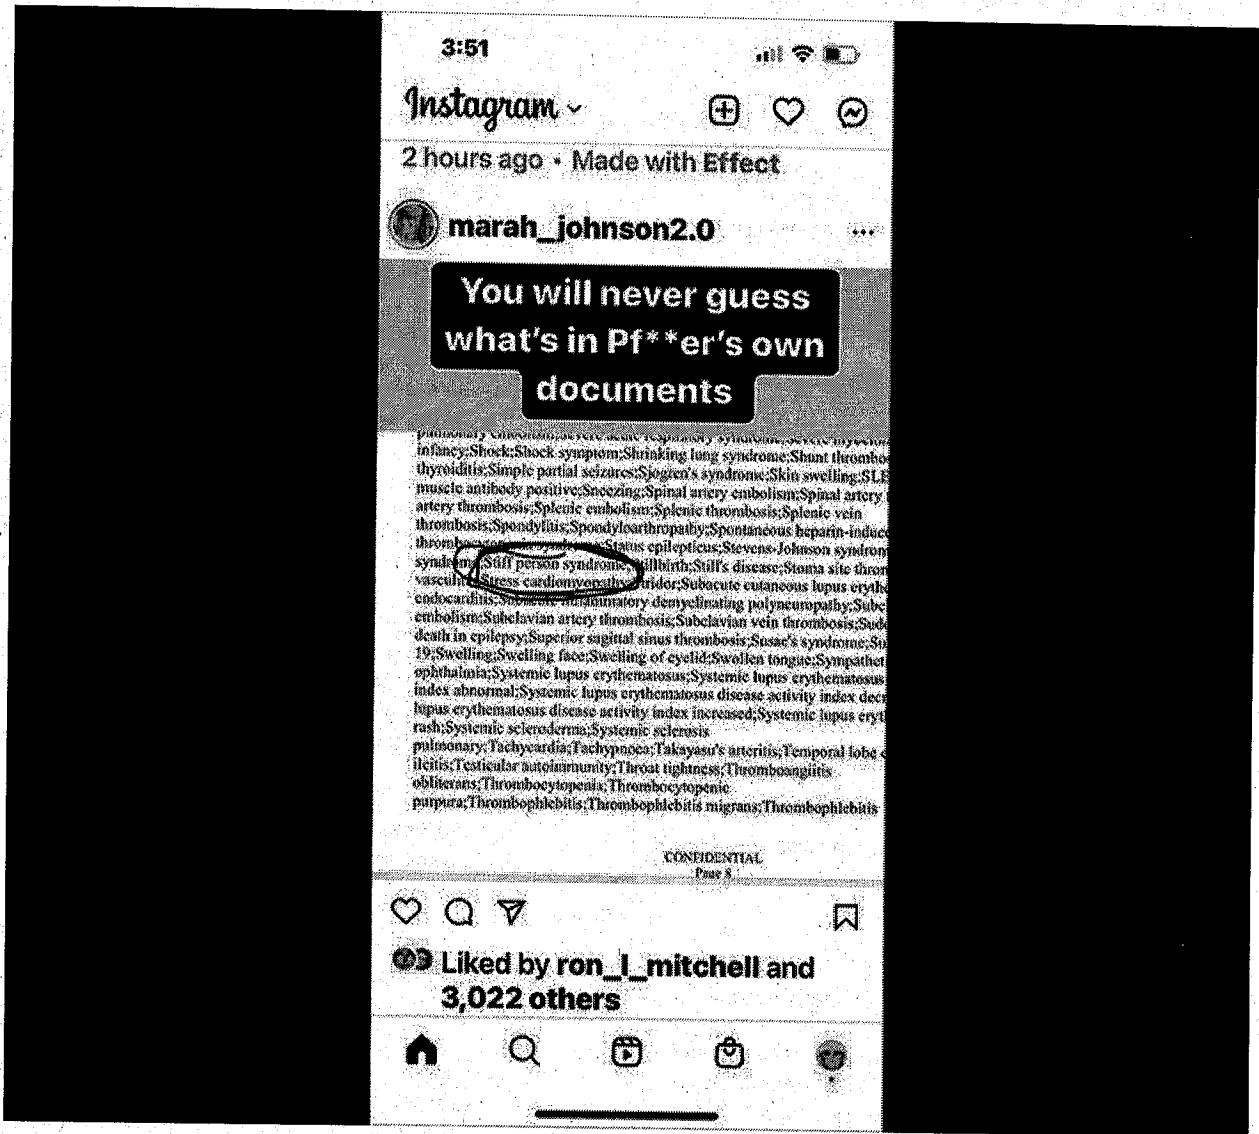

You will never, not in a million years, guess what is a known listed side effect of the Pfizer COVID vaccine?

Give up?

Answer below:

17-2

We have proof that Pfizer knew about SPS in Feb 2021

Pfizer knew about this potential side effect likely before Celine Dion was vaccinated, but they have no duty to disclose that because hey, it's a safe and effective vaccine with only mild side effects. The FDA simply looks the other way for safety issues. That's the way science is done.

Pfizer knew about SPS in February 2021 and the FDA knew about it on April 2021. But the FDA isn't going to warn anyone about all these side effects because that would create vaccine hesitancy.

Thanks to Amy Kelly of dailyclout.io, we know that SPS was reported in **Pfizer's postmarketing documents** on page 37, which is also page 8 of Appendix 1. Being in this document indicates that Pfizer was aware of it no later than 2/28/21, and the FDA knew about it no later than April 2021.

So the FDA and Pfizer clearly know and told the public nothing. They aren't liable for any damages even if they didn't give anyone informed consent by revealing all the side effects.

17-3

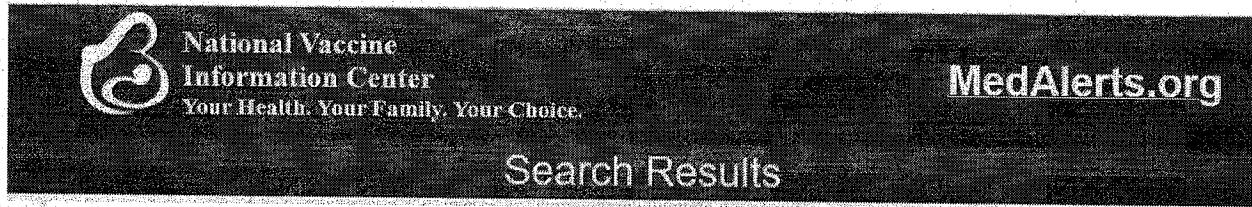

I don't know if Celine got the Pfizer vaccine or not, but the side effect profile of the other vaccines is even worse, so my arguments apply no matter what vaccine Celine got.

VAERS data shows any post-vaccine diagnosis of SPS is 283X more likely caused by the vaccine than by "bad luck"

Now lets' look at VAERS. Guess what? If you get SPS post-vax, there is a 99.6% chance it was from the vaccine.

The numbers for SPS over 30 years only implicate the COVID and HPV vaccines.

Note: You should read the Turtles All the Way Down book about the HPV vaccine (starting on page 112) and how they covered up the safety signal there; they used the exact same gaslighting techniques they perfected with the HPV vaccine on the COVID vaccines).

From the 12/2/2022 release of VAERS data:

Found 32 cases where Symptom is Stiff person syndrome

Government Disclaimer on use of this data

Table

↓	↑ ↓	
Vaccine Type	Count	Percent
	30	93.75%
COVID-19	17	53.13%
Diphtheria	1	3.13%
HPV	11	34.38%
Influenza	1	3.13%
Pneumonia	3	9.38%
Rotavirus	1	3.13%
Tetanus	1	3.13%
TOTAL	† 65	† 203.13%

† Because some cases have multiple vaccinations and symptoms, a single case can account for multiple entries in this table. This is why the Total Count is greater than 32 (the number of cases found), and the Total Percent is greater than 100.

So for a "safe" vaccine like the flu vaccine (which I'm not conceding is safe, but just for the sake of argument), we'd get 1 report in 30 years (.03/yr). For COVID, we get 17 reports in 2 years (8.5/yr). So the relative rate increase is $8.5 / .03 = 283$.

In other words, math says that the chance that Celine Dion got SPS from the vaccine is 99.6%.

In short, it is almost certain that Celine Dion is vaccine injured.

17-4

But wait, there's more! SPS can happen the SAME day as the COVID vaccine!!!!

If you think that's not causality, then explain the VAERS report below. It shows SPS can start IMMEDIATELY after vaccination. This is likely because it is causal, because the chance this would happen by "bad luck" is very small. Remember, there was just 1 report for the flu vaccine in 32 years. What do you think the chance is of a spontaneous SPS happening on the same day as a vaccination with the COVID vaccine? Very close to zero.

 CDC Spike Type: PFIZER INC202178314

Write-up: Stiff person syndrome (SPS) report; fell down from the chair. This is a spontaneous report from a contactable pharmacist received via COVID-19 Vaccine Adverse Event Reporting System (CVAES). The patient was a 22-year-old female and didn't know whether she was pregnant or not. Whether the patient received any other vaccines within 4 weeks prior to the COVID vaccine was unknown. Prior to vaccination, whether the patient was diagnosed with COVID-19 was unknown. The patient had allergy to shrimp, crab and penicillin. Other medical history included Epilepsy. Concurrent medications were not reported. On 25 Jun 2021 (the day of vaccination), the patient received the first single dose of BNT162B2 (COMBIVAX) Solution for Injection, Lot number EW0207, Expiration date 30Sep2021 via an unspecified route of administration for COVID-19 immunization. On 25 Jun 2021, the patient experienced fell down from the chair and was lying face down. The patient was experiencing stiff person and eyelids raise upward. After the incident, the patient received the usual treatment level and got up by herself and showed to the speaker. The reporter stated the events result in doctor of other healthcare professional office visit. The outcome of the events was unknown and whether got treatment was either unknown. Since the vaccination, whether the patient has been tested for COVID-19 was unknown. No other symptoms are reported. His further information is provided: Sender's Comments: Based on known drug safety profile, there is reasonable possibility of causal association between the events Stiff person syndrome, Gaze palsy, Fall and the suspect drug BNT162B2. The impact of this report on the benefit-risk profile of the Pfizer product is evaluated as part of Pfizer procedures for safety evaluation, including the review and analysis of aggregate data for adverse events. Any safety concern identified as part of this review, as well as any appropriate action (re: response), will be promptly notified to regulatory authorities, Ethics Committees, and investigators, as appropriate.

How do you explain this? It happened right after the shot, on the same day. Of course, this person could have been "unlucky" but when you look at the other reports, they occur in close proximity to the vaccine.

Reuters "fact check"

Here is the Reuters "fact check" for you to compare how THEY interpreted the VAERS data.

Well.... they didn't. Can you believe that? VAERS is the official US government adverse event reporting system that they spend \$100M or more a year to maintain and the experts don't even look at it?!?!

According to the experts contacted by Reuters there is absolutely no evidence that the COVID vaccines cause SPS:

[Scott] Newsome, also Associate Professor of Neurology at the Johns Hopkins Hospital, echoed this: "The short answer is, there is no data or evidence to suggest that the COVID-19 vaccine causes Stiff Person Syndrome. This is also the case for other vaccines."

Wow. Contradicted by the evidence in plain sight. These experts cannot explain the data above. They don't even mention it. If they had mentioned it and gave a reason to dismiss it, I'd listen to their reason. But to gaslight Reuters with false statements about data "not existing" when it is in

17-5

plain sight, that's downright unethical. Newsome should avoid commenting in areas where he lacks competency.

Reuters never contacted me on their fact check because THEY NEVER CONTACT ANYONE on our side to dispute their experts.

So these "fact checks" are ALWAYS one-sided (at least all the ones I've ever read). Have you noticed that? They are propaganda pieces. They should be researching the evidence on both sides and then presenting a conclusion. Instead they only call experts who agree with the government narrative. That's NOT fact checking.

One other thing. The fact check said that SPS was an auto-immune disease:

The exact cause of this rare condition, which affects "only about one or two in a million people" according to John Hopkins Medicine ([here](#)), remains unknown, but it has been commonly associated with an autoimmune reaction...

Hello.....!!!! There is GOBS of evidence COVID vaccines cause auto-immune diseases. How do you think the people died in the **Schwab study** for example? It's crystal clear. Those patients died because the immune system attacked their heart. That's called auto-immunity. I can't believe the "experts" Reuters contacts are so brain-dead that they don't even understand the basics about the COVID vaccine. Willful blindness as Dr. Aseem Malhotra would say.

The "it's just overreported this year" argument

Debunkers will claim that VAERS is overreported this year.

Nope. There is no evidence VAERS is any more overreported this year than other years. I've done multiple surveys on this and spent a lot of money to show it wasn't overreported.

And the evidence is in plain sight on the OpenVAERS site which shows that ONLY the COVID vaccine is "overreported."

Bottom line is if you make the claim that it is "overreported" please show me your evidence of that. Or accept my debate offer at the top and we can go through all the data.

Response from Professor Newsome

On December 17, 2022, I reached out to Professor Newsome for his comments and sent him a link to this article. If he responds, I will post it.

Summary

The COVID vaccines CAUSE SPS as well as **hundreds of other severe adverse events which I documented LONG ago**. There is simply no other way to explain the numbers in VAERS. Nobody will debate me on this.

Celine Dion developed SPS after COVID vaccination.

The chances she got it from the vaccine is 99.6%.

17-6

Will she go to a doctor who specializes in treating the vaccine injured? Nope. It's highly likely she was told it wasn't the vaccine by her doctor. Which means unfortunately, she will likely never recover since in general, the sooner you are treated properly, the greater the chance of making a recovery. To get proper treatment, you need to see a doctor who understands the cause.

Will Celine's doctors ever tell her about this article? Nope. What a shame.

Celine Dion could be a powerful voice to warn people not to take the vaccine if she has the courage to speak the truth.

18-1

Video: BBC Studio Windows Covered In Stickers Symbolizing Deaths Caused By COVID Jabs

January 15th, 2023

This is was peaceful protest looks like.

Video out of the UK shows people want answers regarding the deadly experimental COVID jabs.

Footage shows hundreds of stickers representing loved ones believed to have been killed by the vaccines plastered on the BBC studio's windows in London.

A couple of the stickers were fashioned together to create the phrase "Tell the truth" and "Jabs Kill."

A banner hanging in front of the building also says, "BBC is the Virus!"

The BBC – along with the rest of the legacy media – has been toeing the official government narrative to scare the public about COVID since the very beginning of the pandemic, refusing to cover anything that deviates from the script and demonizing anybody who challenged the lockdowns, vaccines, or official story about the virus' origins.

Many users on social media praised the act of protest, calling for more peaceful and powerful demonstrations like these to spread to the US and Canada and to doctors offices and hospitals.

This comes as excess deaths in the UK have skyrocketed since 2021, with most COVID deaths now occurring in the vaccinated.

19-1

MSNBC Anchor Admits Her Own Children Refused To Get COVID Boosters

by Kelen McBreen

December 29, 2022

'No, we don't want to. We've had enough vaccines and we don't think we need them,' the kids said.

The mother was 'shocked and appalled' her family would refuse the jabs.

MSNBC contributor Katty Kay revealed during a recent news segment that her 22-year-old and 16-year-old children do not want to get any more Covid vaccine boosters.

Speaking to fellow *MSNBC* contributor, Dr. Zeke Emanuel, Kay told viewers she expected people to be rushing to get their Covid jabs updated amid a rise in variants and the flu.

However, she revealed even her own offspring are suspicious of the medical, media and political establishments pushing the experimental and dangerous shots on the masses.

Kay explained, "I had a strange conversation with my 22-year-old and my 16-year-old last night and I said, 'Ok, I've booked you in for Covid updates, you're both back for the holidays, you're going to get your boosters.' And both of them said, 'No, we don't want to. We've had enough vaccines and we don't think we need them.'"

MSNBC's Katty Kay said she was "shocked and appalled" when her kids, 22 and 16, told her they did not want to get any more COVID boosters.

"Is this the kind of response you're seeing from young people...they think this is over and they don't need any more vaccines?" pic.twitter.com/HzpFPgKmYz

— Julio Rosas (@Julio_Rosas11) **December 29, 2022**

The *MSNBC* anchor said she was "shocked and appalled" by her kids thinking for themselves and refusing to be constantly jabbed.

Kay asked Dr. Emanuel if this sentiment is common among young people, and he answered, "Yes. But, I would say that we keep thinking vaccines are going to prevent getting Covid. They don't prevent getting Covid. What they prevent is serious illness, hospitalization and death. And young people think they're invincible, and yes they are at lower risk from Covid, but that's not zero risk."

Dissecting the lies presented by the doctor during his response is simple.

For one, everyone from Joe Biden to Dr. Fauci claimed when the shots were first introduced that the vaccinated couldn't get Covid.

19-2

Now, with the truth coming out, people like Dr. Emanuel are forced to admit these statements were false.

🚫 You can't sue due to a vaccine death or adverse side-effect

But Biden(and all others) aren't protected from the Big Lie saying "You won't get Covid if you take these vaccines"

We Need a Huge Class-Action Law Suit for anyone who got COVID after taking the vaccines. pic.twitter.com/l2A0J4z2HQ

— Censored American NO MORE (@NotADirtyDem) **August 1, 2022**

Also, the doctor's claim that the vaccines "prevent serious illness, hospitalization and death" is a flat-out lie.

In fact, the total opposite is true as *CNN* Medical Analyst Dr. Leana Wen recently admitted, "**Vaccinated people who never had COVID were at least three times as likely to be infected as unvaccinated people** with a prior infection. And a *Lancet* study found that **those who were vaccinated but never had Covid were four times as likely to have severe illness resulting in hospitalization or death** compared to the unvaccinated who recovered from it."

Dr. Leana Wen Now Admits 'Pandemic of the Unvaccinated' Was a Total Lie

"The CDC, she [Dr. Leana Wen] said, has now determined that 'Vaccinated people who never had COVID were at least three times as likely to be infected as unvaccinated people with a prior infection.'" pic.twitter.com/6gWXvzk5vM

— The Vigilant Fox 🦊 (@VigilantFox) **December 27, 2022**

Next, Dr. Emanuel claimed the only thing that can stop the spread of Covid is an N95 mask.

Meanwhile, even Joe Biden's top Covid advisor Dr. Ashish Jha admits there's "no study in the world that show that masks work that well."

Top White House Covid Advisor, Dr. Jha, finally admits on a recent zoom call that there's "no study in the world that show that masks work that well."

You don't say? Color me shocked. [#Masks #masksdontwork pic.twitter.com/98jibK0Lhl](https://pic.twitter.com/98jibK0Lhl)

— Sue Knows Best (@sues86453) **December 24, 2022**

Easily refutable claims like those made by Dr. Emanuel are actually contributing to the distrust of the establishment shown by individuals just like Katty Kay's children.

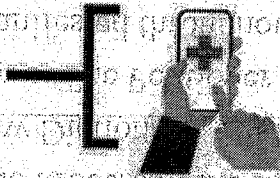

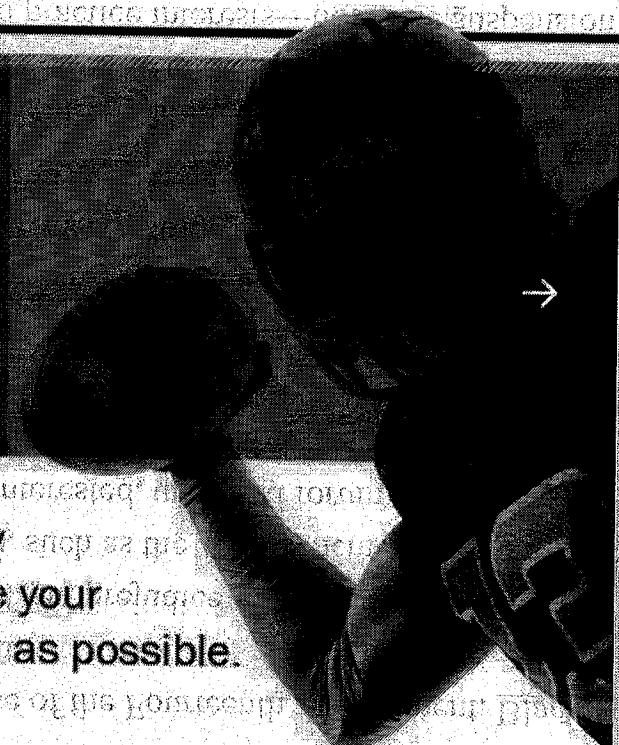

20-1

“Everyone is at Risk for Blood Clots!” – CDC and Pfizer Issue Urgent Warnings on Blood Clots Even in “The Healthiest Athletes”

By Jim Hoft

Published February 19, 2022

Everyone is at risk for blood clots!
Even the healthiest athletes get blood clots, so it is important for **EVERYONE** to know the warning signs and how to decrease their risk.

If you have any symptoms, see your doctor as soon as possible.

Both CDC and Pfizer have recently issued a public warning about “blood clots.”

Last February 10, the CDC issued a warning normalizing the idea that young adults and healthy athletes develop blood clots.

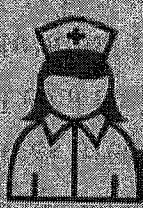

Of course, no one has ever heard of this frequent phenomenon before the COVID vaccines.

#DYK [do you know] that anyone can develop a blood clot? Whether you’re an athlete or a fan, don’t let a blood clot ruin the big game this season!

weekend. Learn how to protect your health: <https://bit.ly/2IOpGEB>," CDC tweeted out.

The CDC failed to mention on their website the COVID-19 vaccines as one of the factors that can increase this risk.

Everyone Is at Risk. Some Factors Can Increase This Risk.

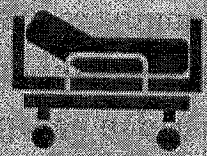

Hospitalization and Surgery

One-half of blood clots occur during or soon after a hospital stay or surgery.

50%

Being Immobile

Not moving for long periods of time (for example, extended bed rest or extended travel).

Other Risk Factors

- Older age
- During and just after pregnancy
- Overweight or obese
- Estrogen-based medicine such as hormonal birth control or hormone replacement therapy
- Family history of VTE
- Injury and trauma
- Recent or recurrent cancer

Be cautious of the ...
