23-Year-Old University of Arizona Swimmer Ty Wells Dies 'Suddenly'

By **Jim Hoft**
January 31, 2023

The University of Arizona's former swimming standout, who competed from 2018 to 22, died unexpectedly on Friday, according to Arizona Athletics.

Ty Wells died on Friday, January 27. He was 23.

"We are deeply saddened by the loss of recent alum Ty Wells, who passed away on Friday," Arizona Athletics announced on its social media Tuesday.

"Our heartfelt condolences are with his family, his friends and the entire **Arizona Swimming & Diving** family," the post concluded.

"On behalf of the entire University of Arizona community, I want to extend our heartfelt condolences to the Wells family along with Ty's friends, teammates, classmates, and colleagues," UA athletic director Dave Heeke said in a statement.

"Ty was a tremendous young man who proudly represented the University of Arizona in the pool, classroom and community. He was a light that shined bright in the lives of everyone he came across, and we will keep him and his loved ones in our thoughts during this incredibly difficult time."

No details have been released on the cause of death.

Local news media **Swim Swam** debunked rumors that Wells died in a motorcycle accident. According to the report, "the confusion may stem from a 2022 motorcycle accident in California that involved an individual with the same name."

It added, that the medical examiner is currently looking to determine the cause of death.

According to his fundraising campaign, Wells died suddenly.

"Our Arizona Wildcat swimming family was devastated at the **sudden passing** of one of our most adored swimmers this past Friday. He was a guiding light to all of his friends and teammates as well as to all of us parents," according to the **GoFundMe page**.

1.2

More from [Swim Swam](#):

Wells was in his 5th year on the team at Arizona and was majoring in physiology with plans to pursue a career in physical therapy or sports medicine.

A native of Ripon, California, Wells was a 2021-2022 CSCAA Scholar All-American. Last season, Wells finished 12th in the 100 breaststroke at the Pac-12 Championship meet.

While his only NCAA meet of the fall semester was Arizona's intrasquad, his last competition was the 2022 US Open Championships, where he finished in 50th place in both the 100 breast and 200 breast.

As a senior at Ripon High School in 2018, he qualified for the California High School State Championship meet, where he finished 13th in the 100 yard breaststroke.

Rest in Peace.

Service Member Karolina Stancik Speaks Out About Her Horrific Injuries, Heart Attacks, Stroke from COVID Vaccine

By Margaret Flavin
January 29, 2023

Karolina Stancik joined The Gateway Pundit's Twitter Space on January 25th to discuss the military vaccine mandates and share the heartbreaking story of the vaccine injury that resulted from the mandate.

Karolina is a 23-year-old athlete, patriot, and Christian who joined the military because of her desire to serve her country and to help others.

Her GiveSendGo shares, "In order to serve, she took the COVID-19 vaccine, but tragically, her life has been permanently altered because of it. After two doses of the Moderna vaccine, Karolina has had two heart attacks and a mini-stroke, and she suffers from multiple other ailments and complications because of the vaccine."

"The future of her health is uncertain."

"Now, TRICARE, the military medical system, is not paying her medical bills, and she stands to face more than \$35,000 in medical debt on top of the tens of thousands in treatment and travel costs that will be required to get her the proper medical care to hopefully recover fully."

2.2

Karolina will be joining The Gateway Pundit's Jim Hoff on Sunday, January 29th, at 4:00 pm Eastern. You can watch the interview [here](#).

Karolina shared a letter describing her heartbreaking journey.

Note: The thoughts and opinions of Karolina are her own and she does not represent the Department of Defense, the Army National Guard, the United States Army or any Government agency.

I joined the military because I wanted to serve and protect those who cannot do it for themselves. In order to serve, I was told I had to get the vaccine. I was hesitant because I was uncertain if the vaccine was even safe. I was a healthy 21-year-old woman in the best shape of my life, and I have never had a single medical condition. I decided getting the vaccine was the right thing to do, but now my life will never be the same. I have an enlargement in my heart, two heart attacks, POTS, asthma, allergies, nerve problems, and I suffered from a stroke. I have dealt with 9 ER visits, 5 Holter monitors, 5 doses of beta blockers, and pain medication. I am just a 22-year-old balancing the weight of \$35k in medical bills while fighting to get healthy, and the military is completely uninterested in helping me.

Shortly after I received the first dose, I experienced massive headaches, pressure in my head and sinuses, soreness, fatigue, and dizziness. I was oblivious as to what this could be because I was a fully healthy individual. I thought it was something I could shake, but the next day, the symptoms did not subside. I was sent home because I was unable to do my duties with "covid symptoms" and I was told "it's not that uncommon to have fleeting side-effects."

After the second dose, more symptoms manifested. The same day, I was playing the role of a casualty for others to learn combat care routines. As part of the training, someone took my pulse and noticed that it was abnormally high. I was dizzy. I had pressure in my chest. Sore. Coughing. High heart rate. Later that evening, I experienced a fever. To this day, it is the only fever I have experienced. I was in bed, barely able to move, with numbness, pressure, headaches, and nausea. It seemed absurd for me. That was never something I experienced for 21 years of my life. Infact, I have never developed any serious health conditions.

Two months after the second dose, I was treated for a respiratory infection and tested negative for covid every time they ran a test. It worsened over the next 10 weeks, and I noticed that I was becoming more and more short of breath from something as simple as lying down. In September, conditions were exasperated, and I began coughing blood with dizziness, headaches, and a high heart rate. My pain was intolerable, and I could not sleep. It felt like a 45-pound plate was sitting on my chest and at this point fear was overwhelming. I was treated for fractured ribs, and asthma even though I had no medical diagnosis for either condition.

A month later, I began to experience what felt like a balloon in my chest. It felt like a balloon that would blow up and push against my sternum. When that occurred, I would get dizzy and lose feeling in my limbs. The balloon sensation would deflate slowly, and I would lose my vision. This became consistent. I went to the clinic and was told to come back another day because it was too busy there. I was forced to go to the ER, which I have never been to. When I arrived, they

2.3

put me in a triage, checked my vitals, and ran an EKG. I was shocked to learn I had experienced a heart attack.

After the heart attack, my symptoms grew even worse. I went to the ER in October, December, January, February, April, June, and July. I could not breathe, my heart was weak, and I feared for my life. I was diagnosed with severe asthma, and I was prescribed a Holter monitor. Doctors discreetly addressed the loss of feeling I would experience. I went to countless appointments, and nothing resolved. Lab tests showed I suddenly developed allergies to everything from cats to pollen and ragweed. In 21 years of life, I had never experienced allergies before.

Throughout January and February, I was in and out of the ER with the same symptoms that were gradually worsening. I was then told about a diagnosis of POTS (Postural Orthostatic Tachycardia Syndrome). All my EKGs in every ER visit came back abnormal. One night, I woke up around 11 pm and stood up to use the bathroom with a 167-heart rate. The pain in my body was excruciating. I experienced what felt like being stabbed, extreme nausea and vomiting, and I blacked out. I was admitted the rest of the weekend and slept for almost 5 days straight after. I was transferred to Virginia to seek out additional medical attention. I just wanted to go home and get better. I saw my first cardiologist, allergist, and pulmonologist. It was reiterated that I was allergic to everything. They increased my medication for asthma, and I developed an enlargement in my heart. I learned I had another, more severe, heart attack.

Most recently on November 20, I experienced a loss of vision, motor function, and high blood pressure. I was admitted to the ER again and I learned I had suffered from a stroke on top of my other serious issues.

To this day, I experience pain, discomfort, numbness, and asthmatic complications daily. I have been prescribed multiple medications. One causes depression and worse palpitations without resolution. It feels like a permanent and confusing battle. My cardiologist confirmed that I cannot receive any more vaccines and that the covid shot is the reason for these medical complications. As of now, I have a heart enlargement, POTS, asthma, allergies, and nerve problems.

Throughout this entire agonizing process, I have received no help from the military. I have not been given the necessary paperwork or due process to be reimbursed for my medical bills, even though I took this vaccine as a requirement for my service. I was even accused of insubordination for following my doctor's own orders during a physical training event. I have been met with hostility, indifference and dismissal by the people who are supposed to be taking care of me.

These vaccines are not worth it. I am living proof of it. It feels like the military has completely abandoned me and told me "You are no good". I have had medical documents deleted from my files. I have been told to "quit bitching". Numerous, essential medical evaluations have been canceled without explanation, and I am not alone. Our military is not protecting those with vaccine injuries, and we are being forced to pay with our own health to continue these vaccine mandates. I joined the military to protect and serve, but the military is not protecting and serving its own.

14-Year-Old Soccer Player Dies Suddenly at Home Day After Training with Teammates

By Jack Davis January 29, 2023 THE WESTERN JOURNAL

A 14-year-old Spanish soccer player has died, with no word revealed about the cause of her death.

Estrella Martín Rasco was a member of the Andalusian under-15 team, according to a Google Translate version of a report on the Spanish-language site [canalsur.es](https://www.canalsur.es). She was a part of the soccer team Sporting Club de Huelva.

On Tuesday, she practiced with her team as normal, the site reported.

The site said that when her parents went to awaken her the next day, she was dead.

“Sporting Club de Huelva deeply regrets to announce the death this morning of our player Estrella Martín Rasco in her native Ayamonte,” the club said in a statement, according to [EuroweeklyNews](https://www.euroweeklynews.com).

“A member of our youth ranks, the player, a cadet player and a regular member of the U-15 women’s national team, left us today in her home town of Ayamonte, leaving a deep sorrow in her family, friends and the whole club,” the club posted.

Real Madrid, one of the world’s most popular soccer clubs, wrote a message of condolence on Twitter:

“Real Madrid, its president and its Board of Directors deeply regret the passing of Estrella Martín, @sportinghuelva’s youth-team player. The club wishes to express its condolences and affection to her family, her teammates, her club and her loved ones. Rest in peace,” Real Madrid posted.

Sporting Club de Huelva suspended the youth team’s training after Rasco’s death.

“There are no words to comfort family and friends. All my support and strength for them. Fly high, Estrella. You will always be the light that guides us. RIP, little one,” Manuela Romero, president of Sporting Huelva, wrote, according to [Huelva24.com](https://www.huelva24.com).

[Euroweekly](https://www.euroweeklynews.com) noted that last month, Marvelous Onanefe Johnson, 13, another soccer player, collapsed on the field and died.

The site reported that efforts were made to revive the athlete on the field, but that those were not successful.

Algerian Football Player Drops Dead During the 'African Nations Championship' Match

By **Jim Hoft**
January 28, 2023

An Algerian football player tragically died suddenly during a match at the African Nations Championship (CHAN) on Tuesday, January 24, 2023.

Algeria football community is mourning as it hosts this year's African Nations Championship (CHAN), a biennial African national association football tournament organized by the Confederation of African Football.

Ben Idir Mehenni suddenly collapsed on the pitch a few minutes before the end of the match against MC Rouiba. The incident occurred at the Reghaia stadium.

According to **local media**, Mehenni was rushed to the Reghaia hospital, where he was later pronounced dead.

Ben Idir Mehenni is a football player playing for the Algerian football club 'Union Sportive de Oued Amizour.'

The Algerian Football Federation paid tributes to Ben Idir Mehenni on its Twitter account.

The Vice President of the Mauritanian Football Federation, Abab Amgar Deing, also died in Algeria while he was on the Mauritanian national team competing in the African Nations Championship (CHAN).

The Algerian Football Federation also paid tributes to Amgar Deing.

During the African Nations Championship (CHAN) in 2021, the MC Saïda player, Sofiane Loukar, also died during a match.

Radio Alergerie **reported**:

[*Translation*] MC Saïda player Sofiane Loukar died this Saturday during his team's trip to the Habib Bouakeul stadium (Oran) to play against ASM Oran as part of the 10th^{day} of the national league championship. 2, Center-West group.

The drama took place in the 25th minute following a telescoping between the deceased and his own goalkeeper. The head of the axial defender then hit the ground causing a head trauma, not detected at the time.

After receiving first aid, the player returned to the pitch, unaware that he was about to step onto the pitch for the last time in his life, as he collapsed again in the 35th minute. The medical staff of the two formations intervened to try to resuscitate him, before being evacuated in emergency, however, he died before even arriving at the hospital in Oran.

Teen Who Taught Hundreds of Kids How to Swim Dies Suddenly After Cardiac Arrest: 'Shocked and Devastated'

By Jack Davis January 28, 2023

A 19-year-old British girl who died of cardiac arrest is being remembered for her kindness.

Details of the death of Mia Jennings were sparse, and no public mention was made of her medical history, but there was no mistaking the affection in which she was held.

"We are sharing with great sadness that our dear colleague Mia Jennings passed away this weekend after suffering a cardiac arrest.," the Macclesfield Leisure Centre posted on [Facebook](#).

The center called her "a model employee and star apprentice in our HR Team and swimming teacher to hundreds of children at Macclesfield Leisure Centre."

The center noted that her [family and friends](#) are "understandably shocked and devastated at this time." The center said Jennings was the kind of worker and person whose passing would leave a hole in many lives.

"Mia showed great dedication and commitment at work – excelling in all that she did. She was hugely respected by colleagues, customers and the children she so passionately taught each week," the post said. Jennings, according to the center was "a rising star."

"[S]he received special recognition as an outstanding apprentice at the North East Cheshire Chamber Business Awards and the South Cheshire Chamber Awards," the post said.

"Most importantly, Mia was a kind and caring person who always wanted to give her best and help others. Her beautiful smile lit up every room she was in, and she made a positive impression on everyone she met," the post said.

Maighan Mclean, a [friend](#) of Jennings, called her late friend "the most kind and caring girl we have had the pleasure of knowing, although our time together was short there will never be a moment that was taken for granted," according to [The Sun](#).

"Our love goes to her family and loved ones during this devastating time," she said. According to a page set up for Jennings on the website [Just Giving](#) by Callum Mcleod and Mclean, funding raised will go to SADS UK.

On its [website](#), SADS UK says it works to provide information and equipment to address sudden [cardiac death](#).

"There are no words to describe how heartbreaking this has been, hopefully through the help of everyone we can fundraise to continue Mia's legacy and bring this charity to light so research can be funded, information can be provided and medical equipment can be bought," the page said.

Australian Olympic Bobsledder and Rugby Player Dies Suddenly at 35

January 24, 2023 Jim Hoft

Simon Dunn playing rugby and bobsledding. (Facebook)

Simon Dunn, an Olympic bobsledder and rugby player who came out as gay and later became an activist for LGBTQ rights, died suddenly on Saturday. He was 35.

The athlete's body was discovered in his home on January 21st, according to the New South Wales police.

Dunn's cause of death is still unclear but the authorities have stated that his death is not viewed as suspicious.

"About 10 am on Saturday, January 21, 2023, police were called to a unit on Crown Street, Surry Hills, after reports the body of a man had been found inside," New South Wales police **said** in a statement.

"The body is believed to be that of the 35-year-old occupant. Officers from Surry Hills Police Area Command have commenced inquiries into the circumstances

6.2

surrounding his death, which is not being treated as suspicious," authorities continued.

Tributes flood in following the news of Dunn's sudden death.

Ruby Rose Management, Dunn's agents, issued a statement:

"Simon was passionate about giving back to the community and volunteering. He gave his time, and utilizing his profile, to help multiple charities. Like all great ambassadors, he had his favorites which included Bobby Goldsmith Foundation, Give Out Day and Pride in Sport.

"Simon never said 'NO' to donating his time to any organization who wanted to grow its Diversity and Inclusion footprint from Woolworths to Lion – helping them all to better understand their LGBTQIA+ employees and customers.

"Simon represented us all, he always said 'I am not the spokesman, I am just a gay white male telling you about my experiences, and experiences from those with whom I listened and learnt. The sharing of these stories gives us all an appreciation of what has led us to where we are today'."

Tragic: 6-Month-Old Dies Within 10 Days of Pfizer Jab, VAERS Reports

by Adan Salazar

January 23, 2023

Baby also received four other shots, including a flu jab.

A disturbing entry appearing in the VAERS database documents the sudden death of a six-month-old baby within days of receiving an assortment of vaccines, including Pfizer's Covid jab.

According to **VAERS ID #2479506**, the unexpected death of the male baby from Iowa occurred on Aug. 26, 2022, exactly 10 days after he received the Covid shot, in addition to vaccines for pneumococcal disease, rotavirus, flu and DTAP.

▶ A 6 mo. old baby died in its sleep—just 10 days after receiving 4 vaccines and the new EUA gene therapeutic all at once. This democide must end. <https://t.co/omUxXrC0KV> pic.twitter.com/sB61tzZGs9

— TexasLindsay™ (@TexasLindsay_) **January 22, 2023**

"Unexpected death- taking a nap in the afternoon and found pulseless in crib," the entry states, listing his age as "0.50."

7.2

The report also noted, "Shock-associated circulatory or cardiac conditions," suggesting the infant may have suffered a severe heart attack leading up to his death.

Commenting on the tragedy, renowned cardiologist Dr. Peter McCullough remarked the incident is emblematic of how injecting multiple jabs simultaneously "risks overwhelming fatal reactogenicity."

"None of these are medically necessary or clinically indicated at this age," McCullough wrote on Twitter, adding, "Word of mouth among mothers on cases such as this fuels tremendous vaccine hesitancy."

Multiple antigens given simultaneously to an infant risks overwhelming fatal reactogenicity. None of these are medically necessary or clinically indicated at this age. Word of mouth among mothers on cases such as this fuels tremendous vaccine hesitancy. **#courageousdiscourse** <https://t.co/Tds9swwSJy>

— Peter A. McCullough, MD, MPH™ (@P_McCulloughMD) **January 22, 2023**

Indeed, if more parents learned about this terrible entry and many disturbing reports like it they might be discouraged from jabbing youngsters with so many vaccines at the same time – or worse, they might start researching the deadly injections and forgo them altogether!

8.1

High School Football Star in Need of a New Heart After a Major Heart Attack

January 23, 2023 Jim Hoft

A local high school football player is fighting for his life after suffering a massive heart attack in November, and he is asking the general public for help.

Markus Martinez, a former Columbine High School football star and now senior at Bear Creek High School, suffered a major heart attack Thursday, November 17, 2022.

According to a **fundraising campaign** created for Markus, the doctors were successful in removing some of the blood clots, but not all of them.

8.2

Now, Markus' left ventricular heart muscle has been permanently damaged. UCHealth cardiologists have recommended that he undergo a heart transplant because his heart is only functioning at 12–15% capacity. Although the family does not know what caused this, they remain hopeful and are providing Markus with the best care possible.

Markus has been in and out of the hospital since November.

"It's been a little tough on him that he can't get up, get out of bed and do his normal activities and stuff that he used to do, but he's hanging in there," Markus' father, Steven Martinez, told **FOX 31 Denver**.

According to Steven, everyone in the family was shocked upon hearing the news of Markus' sudden heart attack.

"I just couldn't believe it was happening to someone so young and athletic," Steven said.

Shelly Segura, Markus' mother, said that her son needs a new heart as soon as possible.

"His heart is just unfortunately too sick right now," Segura said. "We've all come together and have been praying for him. We're really trying to stay positive for Markus."

You can help the family with Markus' medications, a possible heart transplant, and any other unexpected medical expenses **[here](#)**.

Cardiologist Dr. McCullough On Damar Hamlin: 'Leading Concern Here Is Vaccine-Induced Myocarditis'

by Kelen McBreen

January 4, 2023

'The FDA says the vaccines cause myocarditis and heart damage,' the doctor added.

The tragic on-field collapse of NFL player Damar Hamlin may have been caused by the COVID-19 shot, Dr. Peter McCullough revealed in a recent interview.

During Tuesday's broadcast of *Fox News*' "Tucker Carlson Tonight," the top cardiologist explained NFL athletes like Hamlin are regularly screened for underlying heart issues.

He continued to say that after watching the play that took place just moments before Hamlin collapsed, "it looked like a primary cardiac arrest."

Cardiologist Dr. Peter McCullough discusses his findings with Tucker Carlson on the disturbing trend of more young athletes collapsing on the field with heart issues than ever before.

"The leading concern here is vaccine-induced myocarditis, if indeed he's taken the vaccine." pic.twitter.com/MILxJgecyj

— Scott Morefield (@SKMorefield) **January 4, 2023**

Dr. McCullough commended the work of the medical staff tending to Hamlin on the field and optimistically suggested Hamlin "can have neurological recovery" thanks to their help.

Getting to what may have caused the incident, Dr. McCullough noted the leading concern is "vaccine-induced myocarditis, if indeed he's taken the vaccine."

He also said the doctors working on Hamlin "have a public health obligation to tell us if he's taken the vaccine."

Later, Dr. McCullough told Tucker, "The FDA says the vaccines cause myocarditis and heart damage. Autopsy studies show it can be and is fatal. The same is true for blood clots and neurologic damage. Our agencies should be protecting the health of Americans and safety is job one. I'm disappointed that they're minimizing it."

On Twitter, Dr. McCullough posted an image from [a recent paper](#) showing a sharp increase in deadly cardiac arrests in athletes since January 2021.

This recent paper from Dr. Polykretis and myself gets the sharp rise in athlete deaths into PUBMED. Since vaccination, "1598 athletes suffered cardiac arrest, 1101 of which with deadly outcome. Over a prior 38-years (1966-2004), 1101 athletes < age of 35 died (~29/yr). <https://t.co/IGWFctLx2L> pic.twitter.com/SCieZTsoNZ

— Peter A. McCullough, MD, MPH™ (@P_McCulloughMD) **January 3, 2023**

7th Grader Suffers Two Cardiac Arrests, Spends Four Days in Medically Induced Coma

Lorri Wickenhauser January 19, 2023

A Massachusetts seventh-grader is in a pediatric intensive care unit after suffering two cardiac arrest episodes last weekend.

Nevaeh Vieira complained of chest pain before collapsing in her mother's bedroom, WGGB-TV reported.

Her mother, Krissy, started CPR before the ambulance arrived, an act that likely saved her daughter's life, Dr. John Kelley told the news station.

"Having an immediate response like that within minutes of the event is absolutely crucial," Kelley told WGGB. "If you have no circulation to the brain for five minutes or more, it's very unlikely you're going to get the person back."

Nevaeh was in a medically induced coma for four days, but is now awake.

She suffered some minor brain damage from a stroke she sustained from a lack of oxygen, but is expected to make a full recovery, WGGB reported.

The Massachusetts case is just one of many recent examples of children suffering injury or death due to cardiac incidents.

In December, a cheerleading coach in Memphis, Michigan, used CPR and an automated external defibrillator to revive a student-athlete who went into cardiac arrest, according to a report by WJBK-TV.

Amanda Bobcean, who is also an emergency room nurse, told the station she was in "the right place at the right time." Her efforts restored the student's pulse 15 minutes before EMS arrived, according to the report.

Jennifer Shea, the Beaumont Student Heart Check Manager for Corewell Health East, told WJBK that this was not an isolated heart episode in their state.

"We already have had multiple saves this year in schools," Shea told the station.

Two Las Vegas-area teens also died suddenly after suffering cardiac arrest.

Jordan Brister was pronounced dead after collapsing in a school restroom after PE class Jan. 3.

A GoFundMe created Jan. 7 said, "Jordan Tyler Brister suddenly and unexpectedly suffered cardiac arrest while at school with no explanation as to why. Jordan was a senior in high school who planned to join the military after graduating."

Another Las Vegas teen, 16-year-old Ashari Hughes, died suddenly Jan. 5 after suffering a "medical emergency" while playing in a flag football game. That death was later ruled to be related to a congenital heart defect, according to the Clark County coroner.

11.1

Woman with No History of Heart Issues Dies Suddenly of Cardiac Arrest, Friend Calls on Community for Help

By Lorri Wickenhauser January 17, 2023

A Las Vegas woman has started a fundraising campaign for the family of a friend who died suddenly Jan. 8.

Michele Morgan told KLAS-TV that her friend, Alicia Groeblichhoff, went into cardiac arrest while working out at a gym.

Groeblichhoff, died the next day. She was 46, according to her obituary.

Morgan told KLAS her friend had no history of heart problems before she “suddenly, without warning, collapsed at the gym and suffered a massive cardiac arrest.”

Morgan has set up a GoFundMe to raise funds to help pay Groeblichhoff’s medical bills, which she said “are going to be astronomical” because she had to be transported to the hospital and placed on life support.

The bills are going to be “more than the family can handle,” she wrote.

Groeblichhoff had two children, 15 and 9, and the financial assistance will also help with their college, Morgan said.

As of Tuesday afternoon, the fundraiser had taken in about \$38,000 toward its goal of \$250,000.

Morgan described Groeblichhoff as “my friend and business partner for 30 years.”

“She was such an amazing soul, with a contagious smile, and kindness that we do not see every day,” she wrote on GoFundMe. “Everyone who was fortunate enough to have their path come in contact with Alicia’s, immediately loved her.”

KLAS reported that Groeblichhoff was one of several seemingly healthy people who have died suddenly of apparent heart issues in recent weeks.

During the week before her death, two Las Vegas-area teens also died suddenly.

Jordan Brister was pronounced dead after collapsing in a school restroom Jan. 3.

A GoFundMe appeal created Jan. 7 said, “Jordan Tyler Brister suddenly and unexpectedly suffered cardiac arrest while at school with no explanation as to why. Jordan was a senior in high school who planned to join the military after graduating.”

Another Las Vegas teen, 16-year-old Ashari Hughes, died suddenly Jan. 5 after suffering a “medical emergency” while playing in a flag football game.

Junior Varsity Basketball Player Suffers Seizure and Cardiac Arrest During Game

By Jim Hoft Feb. 1, 2023

Kamari Williams

A junior varsity basketball player at Southside Christian School in South Carolina suffered from a seizure and cardiac arrest during a basketball game on Tuesday night.

The school reported that Kamari Williams, aka K. Will, collapsed during a game against Brashier Middle College.

Chris Young, an athletic trainer, stepped in to perform CPR for 10 minutes till emergency medical services arrived.

According to [WFYY News](#), Williams was able to get stabilized and was sent to the hospital.

"By God's grace, trainer Chris Young was on-site at the game and stepped in to perform CPR for close to 10 minutes until EMTs could arrive," said Denny Vauters of Southside Christian School. "They were able to stabilize Kamari and transport him to the hospital."

"We are praising God for K Will's life, the staff involved in the emergency, and are praying for wisdom for the doctors now trying to understand how and why this happened," Vauters continued.

According to a Facebook post, there has been no further decline in Kamari's condition, including no indication of brain or organ failure.

Of course, the doctors are baffled. They are currently conducting tests to figure out what happened.

"On behalf of the Williams/McGowens family we appreciate all the prayers, calls, texts, and messages for Kamari (K-Will) Williams. As you see in the picture K-Will is doing great and in good spirits," Rod Shaw Jr. wrote on Facebook.

"Updates, K-Will has no brain damage or organ failure. Doctors are still running test to discover what happen. Please continue to pray for him and the family. Please out of respect for the family don't bombard them with calls or messages. We will post another update when we have more info," he continued.

"May God continue to show his hand and purpose in Kamari's life. Let's all be thankful to God for his son Jesus for his blood that never losses its power and the prayers of the saints," the post concluded.

18-Year-Old Athlete on Life Support After Suffering from Cardiac Arrest During Basketball Game

By Jim Hoft Feb. 1, 2023

Cartier Woods (left)

A senior student from Northwestern High School is in critical condition after suffering a cardiac arrest Tuesday night during a basketball game.

Cartier Wood, 18, suffered a cardiac arrest during a game, according to an email sent by the school district superintendent.

"It is with a heavy heart that I send you this late evening email. Earlier this evening, Cartier Woods, a senior at Northwestern, went into cardiac arrest while playing in his basketball game at Northwestern," said Nikolai P. Vitti, superintendent of Detroit Public Schools Community District.

Vitti said that CPR was administered to revive Woods, and he was rushed to the nearby hospital. The teen is still fighting for his life and is on life support.

"He was administered CPR and was rushed to Henry Ford Hospital. As of this email, he is on life support and the next 24 hours are critical for his survival. With the permission of Cartier Woods' legal guardian, his aunt, I send this email to you requesting your prayers, thoughts, and/or well wishes for his recovery. I will be sure to keep everyone updated about Cartier's health, and I pray to give you positive news!" the post continued.

13.2

Dwanda Woods, his aunt and legal guardian, told **ABC Detroit** that Cartier first started playing sports at the age of 10.

"No one can stop him. He just loves playing football, basketball. That's his number one goal of what he wanted to do his whole life," said Dwanda Woods.

According to Woods, her nephew did not have any known heart conditions. Woods added that CPR was performed on him for 40-60 minutes after he collapsed on the court.

"He's been with me since he was a baby and I'm just not sleeping. I haven't ate or drink nothing since yesterday and I just feel bad right now," said Dwanda Woods. "We all just praying and hoping he wake up."

The Woods family said that they are in the process of setting up a fundraising campaign to assist in paying for his medical bills.

More from **Detroit Free Press**:

Three minutes into Tuesday's Detroit Douglass at Detroit Northwestern boys basketball game, Douglas assistant coach Roland Eason noticed Northwestern senior Cartier Woods approach head coach George Tyson.

"Coach, I'm dizzy," Woods said, according to Eason. "I need to come out."

Douglass head coach Pierre Brooks, who coached with Tyson for 18 years, was watching the action on the court until he heard a loud noise.

Woods suffered a cardiac arrest and lay motionless on the court.

"I heard a big bang and I thought it might be a fight or something," Brooks said. "I looked over and it was Cartier that fell out and Coach Tyson jumped to action.

Brooks estimated EMT personnel arrived between five and 10 minutes after the incident and transported the youngster to nearby Henry Ford Hospital.

14.1

Teen High School Student on Life Support After Going Into Cardiac Arrest During Basketball Game

By Lorri Wickenhauser February 2, 2023

A Detroit high school student is on life support after going into cardiac arrest during a basketball game Tuesday.

Cartier Woods, a senior at Northwestern High School, was playing in a varsity game against Frederick Douglass Academy when the incident occurred, according to the [Detroit Free Press](#).

Detroit Public Schools Community District superintendent Nikolai Vitti told the outlet that [CPR](#) was administered before Woods was rushed to nearby Henry Ford Hospital.

The young man was placed on life support, Vitti said.

Athletic director Jay Alexander told [The Detroit News](#) that early in the first quarter, Woods "took himself out of the game, then [collapsed](#) near the bench."

"He was sitting on the sideline and just collapsed," Alexander told the News. "He felt like something was wrong, so he just told the coach he needed to come out of the game because he wasn't feeling well." Alexander said all schools in the public school league, including Northwestern, have an automatic external defibrillator, or AED.

"They did all that stuff [CPR] and the ambulance came and took over, took him down the street to Henry Ford," he said, the News reported. "He was never alert, that's why I guess they are saying [cardiac arrest](#), because his heart stopped, but it wasn't a heart attack."

Pierre Brooks Sr., the coach of Douglass [Academy](#), called it "a pretty tragic scene."

The game was halted and the gym was emptied after Woods' collapse, he said, comparing the situation to the one that occurred when Buffalo Bills safety [Damar Hamlin](#) collapsed during "Monday Night Football" last month.

"It was mutual that based on the emotions of his players and my players and fans that it wouldn't be good if we'd continue," Brooks told the News, adding, "We're all praying for him." [WXYZ-TV](#) reported Wednesday that the young athlete was in the intensive care unit, "where family members say his recovery is up in the air."

Woods' aunt and legal guardian, Dwanda Woods, told the TV station he had no known prior [heart problems](#).

In addition to basketball, the News reported, the 6-foot-3, 220-pound [Woods](#) played quarterback, tight end and linebacker for the Northwestern football team.

His aunt said the teen athlete has played sports since he was 10 and hopes to play in college next year. "No one can stop him," she said. "He just loves playing football, basketball. That's his number one goal of what he wanted to do his whole life."

14.2

The recent increase in apparently healthy young people suffering sudden cardiac events has caused many to question why it seems to be happening so often.

WXYZ ran a related story by Dr. Partha Nandi about why athletes experience cardiac arrest. That article said such incidents can happen for several reasons, including undiagnosed genetic conditions or when athletes suffer a blow to the chest.

Nandi recommended a comprehensive medical history and exam for anyone who has a family history of heart disease, if anyone in the family has died unexpectedly before age 40 or if the individual experiences "warning signs" such as shortness of breath, chest pain, abnormal heart rhythm or fainting.

Others have pointed out that the incidence of young people suffering such medical episodes seems to have started right about the time that most schools mandated the COVID vaccine in 2021.

Twitter user Craig Wax, described as a family physician, author and "champion of individual rights and health freedom," indicated a possible relationship between Woods' collapse and the vaccine. "How long, Pfizer, Moderna, and Janssen, will you abuse our patients?" he asked.

The Centers for Disease Control and Prevention, however, continues to say the COVID vaccines are "safe and effective" and recommends them for children 6 months to 17 years old as well as adults. "The known risks of COVID-19 illness and its related, possibly severe complications, such as long-term health problems, hospitalization, and even death, far outweigh the potential risks of having a rare adverse reaction to vaccination, including the possible risk of myocarditis or pericarditis," the CDC's website says.

UPDATE: "Very Healthy" 18-Year-Old Athlete Who Suffered From Cardiac Arrest During Basketball Game Has Died

By Cullen Linebarger Feb. 8, 2023

The senior student from Detroit Northwestern High School who suffered cardiac arrest from playing basketball last week has passed away.

Fox 2 Detroit **learned** via a relative on Monday that 18-year-old Cartier Woods died while at Henry Ford Hospital. He had been on life support there since January 31.

Cartier did not have any known heart conditions or significant medical ailments. The cause of his collapse and death is unknown at this time.

Cartier's family were holding out hope for a miraculous recovery. They recently held a **vigil** for Cartier, where a large group of loved ones and friends prayed for him.

Family members also asked the public for support. They even started a **GoFundMe** campaign to help pay for Cartier's medical bills.

"**He was very healthy** – he loved basketball," said Shantell Woods, his cousin to FOX 2 last week. "He was very amenable, respectful. We're just asking for prayer – we need it."

"He was a very good person," his aunt, Dwanda Woods said. "He'd give anybody anything, if he had it." The Gateway Pundit previously **reported** Cartier suddenly collapsed during a game against Detroit Douglass.

Before falling down, he **told** his head coach George Tyson he felt dizzy three minutes after the contest started and needed to come out.

Douglass head coach Pierre Brooks then reported hearing a "big bang" while watching the action on the court.

"I heard a big bang and I thought it might be a fight or something," Brooks said. "I looked over and it was Cartier that fell out and Coach Tyson jumped to action.

Medical personnel **arrived** within 10 minutes to perform CPR on Cartier after he collapsed. They continued for 40-60 minutes before Cartier was transported to Henry Ford hospital, where he ultimately died.

Let's hope the Woods family receives the full truth regarding Cartier's passing. These deaths are not normal.

"They are Killing Us All With This Now" – Argentinian Mother Outraged After Losing Her 8-Year-Old Daughter After Receiving COVID Vaccine

By Jim Hoft Feb. 2, 2023

Yasmina Antonella Guevara (Source: Yamil Guevara/Facebook)

Yamil Guevara from Mendoza, Argentina expressed her outrage against the COVID-19 shot after the unexpected death of her daughter.

Yasmina Antonella Guevara, her 8-year-old daughter, died on January 11, 2023, due to vasculitis, an inflammation of the blood vessels, which she developed after receiving the COVID shot.

"I hope that everyone can take a minute of their time. She is my daughter, Yasmina Antonella Guevara, she passed away on 01/11/2023," Mrs. Guevara **wrote** on her Facebook account.

"My daughter was a healthy girl, she was never sick with anything. Apart from the famous COVID vaccine, my daughter started with problems with body aches and things that she had never had. She was the first patient in Argentina with what was supposedly called vasculitis, and the doctors did not know how to treat her to the point that she passed away, leaving great pain in our family," she continued.

Because of the risks associated with the experimental vaccines, Mrs. Guevara urged other mothers not to vaccinate their children

"Do not vaccinate your children with the supposed COVID vaccine, because they are killing us all with this now. It was my daughter, tomorrow it could be your child. I want to fight against the COVID vaccine," she added.

16.2

In another post, Guevara vowed to spread awareness of the danger of the COVID shot.

"For you, daughter, you are already resting in peace, I am going to let each of my friends and contacts know that we have to say no to the COVID vaccine because they are poisoning us, and we are not going to allow them to continue killing people. For you, daughter, we are going to save more lives. God had a [purpose] for you and I know what it was. To be the first patient in Argentina with this disease called vasculitis [caused] by COVID vaccine," Mrs. Guevara wrote.

Mrs. Guevara said that doctors and lawyers are now contacting her regarding the death of her daughter.

"Facebook blocked me because I shared a video where they tell the whole truth about the COVID vaccine. But beware friends, I am not alone in this because there are already doctors and lawyers who are contacting me. To make sure that my daughter's death was not in vain. I am going to speak about what happened to my daughter. Everything she suffered with this disease is sh*t and I already have a lot of information for everyone who wants to communicate with me. I'll leave you my number because here they won't let me show everything we already know 2634244524," she said.

The Gateway Pundit previously reported back in 2021, the Ministry of Public Health of Tucumán, Argentina released a report that a three-year-old girl died last December 16 and the justice system has intervened and will investigate the cause of her death.

"On Thursday, December 16, 2021, at 12:00 hours, a 3-year-old patient, in cardiorespiratory arrest, enters the Emergency Service of the Hospital of the Child Jesus. Advanced resuscitation maneuvers are carried out and, when [she] does not respond, [her] death is declared," the **Tucumán Ministry of Health** said in a statement.

The 3-year-old child, Ámbar Suárez, reportedly received one dose of the Sinopharm, China's COVID-19 vaccine. The police and justice system will investigate the cause of her death and an autopsy will be performed.

"Considering the history of Covid vaccination, contact is initiated with relatives to gather the relevant information, evaluate other backgrounds, and proceed with the investigation of this unfortunate episode," the official statement concluded. Meanwhile, Miriam Suárez, the mother of the child claimed that the vaccine killed her daughter.

American Airlines Pilot Blames FAA Vaccine Mandate For Heart Attack Suffered Just Minutes After Landing Commercial Flight

by [Kelen McBreen](#)

February 2, 2023

Nobody has reached out to the pilot to further investigate his medical episode

'I have had no contact whatsoever from anyone either with the FAA or with the company,' he explained

American Airlines pilot Bob Snow lambasted the Biden administration and Federal Aviation Administration for mandating Covid vaccines for pilots while the shots were still under Emergency Use Authorization.

Snow, who believes a heart attack he suffered last year was caused by his Covid shot, criticized the federal government during an appearance on Tuesday night's airing of *Tucker Carlson Tonight*.

In 2022, Snow suffered a heart attack just six minutes after landing a commercial flight loaded with 200 passengers at the Dallas-Fort Worth airport.

Regarding the medical episode suffered while on the job, Snow told Carlson, "I have had no contact whatsoever from anyone either with the FAA or with the company to query me or to investigate exactly what happened to me in regards to the cardiac arrest that I experienced while I was in the flight deck."

The major airline pilot said he and his co-workers were "treated as giant guinea pigs" by the FAA and that the government failed "to look after our safety."

He told Tucker, "I've been contacted by pilots that have had issues post-vaccine. **I'm well aware of one of my former co-workers who unfortunately passed away** as a consequence of receiving the vaccine, and this is something that it's going to take a long-term investigation to figure out."

Concluding his interview, the pilot told Americans it will take more time before we truly know what kind of "debilitating issues" will come along with the "foolhardy vaccination program that was forced upon Americans and the worldwide population."

Infowars featured a video message by Snow in a compilation uploaded to [Banned.video](#) soon after his 2022 heart attack:

Autopsy Analysis of 2 Teen Boys Who Died Days After 2nd Pfizer Covid Shot Finds 'Global Myocardial Injury'

by Adan Salazar
February 2, 2023

Study examining deaths of boys, who did not previously have cardiac symptoms, found they likely died from 'cytokine storm' inflammatory immune response.

'The microscopic findings are not the alterations seen with typical myocarditis. This suggests a role for cytokine storm...' researchers wrote.

An analysis of autopsies of two teen boys who died last year shortly after receiving a second Pfizer-produced Covid jab found myocarditis conditions different from typical non-vaccine induced myocarditis.

The study, examining the deaths of a boy from Michigan and another from Connecticut – one of whom suffered from ADD and the other from obesity – found the boys, who did not previously have cardiac symptoms, may have died from a “cytokine storm” inflammatory immune response.

Patient	Heart Gross	Microscopic and Molecular
Teenage boy A, BMI = 21. History of attention deficit hyperactivity syndrome	260 g, normal	There was global myocardial injury with areas of coagulative myocytolysis and contraction bands, with a perivascular pattern of inflammation consisting of predominantly neutrophils with histiocytes, scant lymphocytes, and occasional eosinophils (figures 1 through 4; Supplemental Figures 1 and 2). In some sections, the myocardial injury was predominantly subepicardial, and in other sections it was patchy and transmural. In the posterior wall, there was subepicardial/transmural fibrous scar without fatty replacement. There were no acute or organizing thrombi. The overall pattern of injury was consistent with stress cardiomyopathy with contraction bands and a neutrophilic/histiocytic infiltrate. PCR tissue testing performed by the CDC on heart and lung found no molecular evidence of SARS-CoV-2 infection. Molecular testing on postmortem blood detected 2 variants of uncertain significance: DOLK (c.1257C.G [p.Ile419Met]) heterozygous and MAP2K2 (c.581-3C>T [intronic]) heterozygous
Teenage boy B, BMI = 30 with obesity	520 g with biventricular dilatation and marked pulmonary edema (combined lung weight = 1401 g)	There was global myocardial injury similar to that seen above, but with more widespread transmural ischemic changes and more interstitial inflammation, again with a predominant neutrophil component with histiocytes and scant lymphocytes (figures 5 through 7; Supplemental Figures 3 and 4). Several sections had transmural, confluent areas of hyper eosinophilic myocytes; confluent areas of contraction bands apart from any inflammation; and florid neutrophilic inflammation with some histiocytes. In this case, a subepicardial distribution of injury was not seen. There were no acute or organizing thrombi. PCR tissue testing performed by the CDC on heart and lung found no molecular evidence of SARS-CoV-2 infection.

Abbreviations: BMI, body mass index; CDC, Centers for Disease Control and Preventory; PCR, polymerase chain reaction.

The boys were found dead in bed at their respective homes 3 and 4 days after receiving a second Pfizer Covid jab.

“We report the autopsy results, including microscopic myocardial findings, of 2 teenage boys who died within the first week after receiving

18.2

the second Pfizer-BioNTech COVID-19 dose,” researchers from Connecticut and Michigan wrote in the study published in the journal **Archives of Pathology & Laboratory Medicine**.

“The microscopic findings are not the alterations seen with typical myocarditis. This suggest a role for cytokine storm, which may occur with an excessive inflammatory response, as there also is a feedback loop between catecholamines and cytokines... The first week after the second vaccine dose was found to be the main risk window.”

Researchers said the myocardial injuries observed in the two patients were different from typical myocarditis, contributing to their cytokine storm conclusions.

*“The key point is that since these boys died suddenly and unexpectedly in their sleep without resuscitation, if the arrhythmia had been due to the myocardial scar (boy A) or cardiomegaly (boy B), then the fulminant, **global myocardial injury** would not be an expected finding. These 2 clinical histories support the etiology of the acute myocardial injury as a primary factor, not a secondary agonal or postresuscitative artifact.”*

*“The myocardial injury seen in these postvaccine hearts is **different from typical myocarditis** and has an appearance most closely resembling a catecholamine-mediated stress (toxic) cardiomyopathy. Understanding that these instances are different from typical myocarditis and that cytokine storm has a known feedback loop with catecholamines may help guide screening and therapy.”*

The study’s findings add to the growing body of evidence proving the jabs are causing more harm than good.

Crowd Goes Silent When High School Athlete Collapses, Gets Carried Off on Stretcher

By Jack Davis February 2, 2023

A New Jersey high school basketball player collapsed during a game on Sunday and was taken out of the gym on a stretcher.

Tarik Watson, a junior forward for Roselle Catholic High School of Roselle, New Jersey, was stricken during the second quarter of a game against Long Island Lutheran in Brookville, New York, according to Newsday.

"The near-capacity crowd of about 1,000 went silent as trainers, a paramedic and a Jericho Fire Department ambulance crew" worked on Watson, Newsday reported.

"This was the first time we've ever seen a player collapse in this fashion, and it was [a] very scary scene," Brian Reichert wrote for NYC Hoops.

"I don't think he stopped breathing, but he lost consciousness for a little bit. ... But he came back pretty quick," Lutheran assistant athletic director Todd Huebner said.

John Buck, the head coach for Lutheran, said it looked to him as though Watson "fainted without any specific reason and went down."

As a precaution, Watson was immobilized and taken away on a stretcher before being transported to a children's hospital in Queens.

As he was being wheeled out, Watson gave the crowd a thumbs-up.

"He had movement in all of his extremities. ... Everything seemed good when he left," Huebner said.

The game was suspended and Buck prayed with the crowd.

"I've coached for 15 years; I've never had a game stopped in the middle of it," he said.

On Tuesday, Roselle coach Dave Boff said Watson was doing well and resting at home after being discharged from the hospital on Monday night, according to a follow-up report from Newsday.

The basketball recruiting site Rivals ranks Watson No. 102 among juniors, with offers received from Creighton, Georgetown and Providence.

Watson thanked his supporters on Instagram on Tuesday.

"I would like to thank everyone for all their thoughts, prayers and compassion shown towards me during these circumstances. I would like to let everyone know I'm doing well and I appreciate all the love and support for me and my family!" he wrote.

Family in Shock After Their Healthy 21-Year-Old Son Dies Suddenly In His Sleep

By Cullen Linebarger Feb. 4, 2023

Rickson Williams was a beloved former school captain from Wallaville, Queensland, Australia who had his whole life ahead of him. Rickson, however, **passed** away while asleep last month just a few days before his 21st birthday.

Rickson's death continues an alarming pattern of young adults worldwide suddenly dying for reasons unknown. In some cases, **parents** of these young adults have pointed to the COVID vaccine as the culprit.

Doctors found that Rickson had an enlarged heart after his death and believes this may be related to his death. An exact cause of death remains undetermined, however.

What caused his enlarged heart remains unclear at this point as well.

Here is the **story** from news.com.au:

A family is in mourning after a 21-year-old man suddenly died in his sleep.

Rickson "Ricko" Williams, from the town of Wallaville in Queensland, died suddenly on January 11, just days before his 22nd birthday.

The much-loved former school captain was found dead in his bed.

His mother, Tanya Wright, said doctors discovered her son had an enlarged heart after his death.

Ms Wright posted a heartbroken tribute to her son, remembering him as an aspirational young man who was always the life of the party.

"This is not a post I was expecting to write but it's nonetheless one that has to be written," Ms Wright said on Facebook the day after his death.

"Anyone who knew us, knew how much Rickson meant to us and how much this loss will affect our lives and our family.

"He had his whole life ahead of him and had just put in an application to study a bachelor of music."

Ms Wright said they "don't know his exact cause of death" at this stage but thinks his enlarged heart "may be related".

43-Year-Old Tennis Player Dies Suddenly During Match

By Jim Hoft Feb. 4, 2023

Club-level tennis player, Ryan Vannah, tragically died suddenly during a mixed double match on Sunday, January 29.

The 43-year-old player suddenly dropped to his knees and lay down during the tiebreaker of a mixed doubles tennis match at Red Rock Country Club in Nevada.

The doctors who were watching the match rushed to administer CPR, but despite their efforts and 55 minutes of medical procedures, Vannah was not revived.

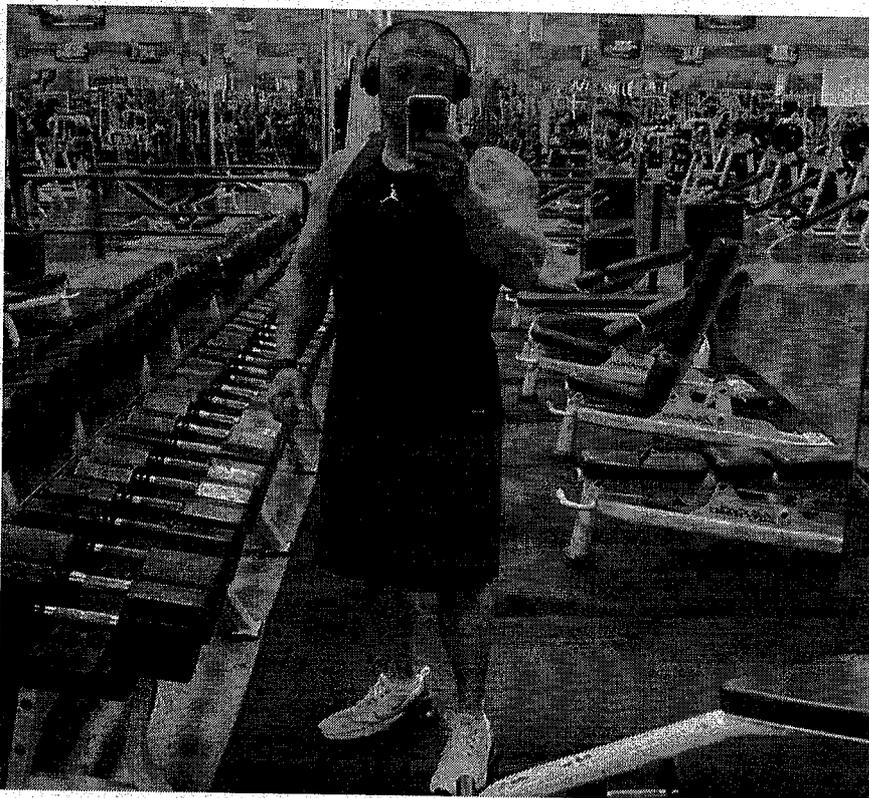

According to **Review-Journal**, Vannah was taking medicine for hypertension. According to his sister, Tami Vannah Kang, he never displayed any symptoms that he was having trouble with his health.

"He took impeccable care of his health," she said. "He was so fit. He lifted weights. He looked like a bodybuilder to me. He was huge. We did not see this coming."

Ryan Vannah was pronounced dead at Summerlin Hospital.

The doctors claimed that Vannah was taking the wrong medication for his blood pressure.

However, the coroner has not determined the official cause and manner of death.

21.2

Essentially Sports **reported:**

Ryan Vannah, resident of Las Vegas, comes from a family of doctors and lawyers. However, unlike his family, he chose sports as a career. He graduated from Durango High School and competed in the state tennis championships.

His family was in shock, as Ryan was in good shape and took extra care of his health. Ryan also used to teach children at local elementary schools for extra money.

His sister was in shock after a huge loss.

Ryan's sister interacted with the media after the sad demise of her brother. She was in utter shock as she revealed that Ryan was extremely fit and it was the first incident of its kind. She also revealed that her husband also used to play alongside her brother at the same club and was present there when the sad incident happened.

Remembering him, she said that Ryan was nice to people and took very little time in making new friends. His friend at Red Rock club, Sean Hubbard, also expressed his shock over Ryan's sudden demise. However, he also claimed that it was not the first time he saw a player collapse on the tennis court, as it happened in the club eight years ago as well.

Tributes poured in following his death.

"With heavy hearts, we announce the death of Ryan Powell Vannah (43 Years old). Leave your condolences, photos and videos on his commemorative page and pay homage to him or send flowers to show you care."

"Today we remember a beloved member of our local tennis community, Ryan Vannah, who tragically passed away this past weekend while playing. We will truly miss seeing him in our store and out on the courts. His friendly smile and kind heart brought joy to our team and all who knew him. We'll miss you, Ryan."

'1923' TV Show Pays Tribute to 32 Year Old Production Supervisor Who Tragically 'Died Suddenly'

By Brian Lupo Feb. 6, 2023

Last night, the popular 'Yellowstone' modern day western brought back it's prequel spinoff series '1923' for the second half of it's season. At the end of the program, they paid tribute to a fallen colleague, Derek Chavez. Chavez passed away suddenly on January 12, 2023. He was 32 and left behind a wife and two children.

While there is no official release on the cause of death, TheCinemaholic has reported that it is "apparently due to a heart attack."

"Derek Chavez died on January 12, 2023, in Albuquerque, New Mexico. Although sources revealed that Derek apparently died due to a heart attack, neither the Chavez family nor the '1923' production team publicized the cause of his death."

While the cause of death is unknown, Chavez was vaccinated on April 6, 2021 and then against sometime around April 29, 2021, according to his social media posts.

At The Gateway Pundit, we are constantly publishing these **Died Suddenly stories** as they come out, especially when they are healthy athletes and young individuals. Hopefully more of the families of these individuals will demand autopsy's to figure out what caused an otherwise young and healthy individual to suddenly die. It is not the individual's fault for not knowing that these vaccines were not safe nor effective as promised by our "leaders," however, they are ultimately the ones who pay the ultimate cost while the families are left shattered. Our sincerest condolences go out to each and every one of them. We will do our best to bring awareness.

Because hardly anyone in the mainstream will.

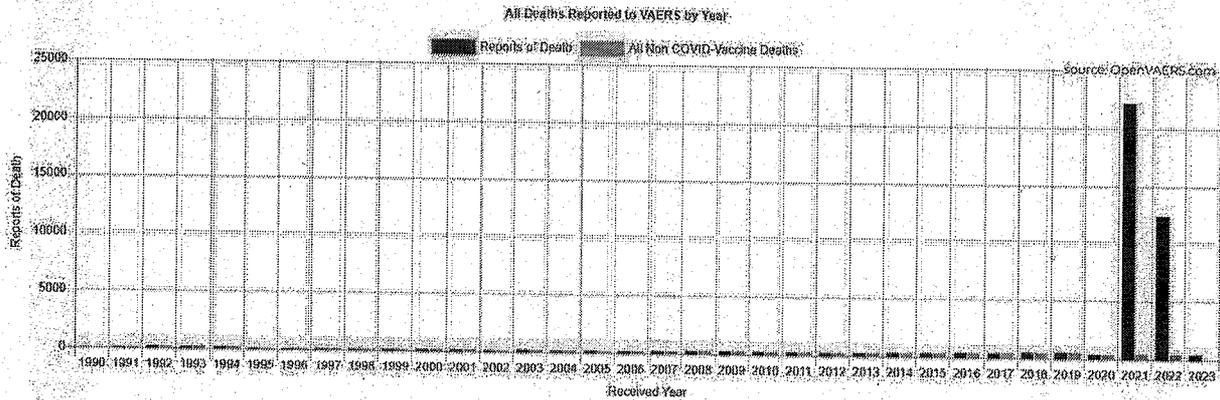

The data is glaringly obvious, but still we are force fed more promotions of these "vaccines." Last night, a **satanic performance at the Grammys** was brought to you by one of those companies.

22.2

Experts consistently and unforgivably continue to deny the proverbial elephant in the room. **OpenVaers** has consistently updated the reported deaths and other chronic problems to their website since the roll out of these unapproved "vaccines". The chart below should warrant an investigation, especially considering, according to a Harvard study, only about 1-10% of vaccine deaths and injuries are reported to VAERS, the government's method of tracking such injuries based on reports from doctors, hospitals and other individuals.

VAERS COVID Vaccine Mortality Reports

Through January 27, 2023

"It Could Have Been a Vaccine..." – UFC Fighter Damon Jackson Reveals His Brother Dies Suddenly Following Receiving COVID Shot

By Jim Hoft Feb. 6, 2023

Ultimate Fighting Championship (UFC) 145-pounder Damon Jackson is still searching for answers for his brother's sudden death.

Damon lost his brother, Bradley (37), in September 2022, a few days before competing at UFC Fight Night 210.

After his brother Bradley passed away, the former Legacy Fighting Championship titleholder changed his moniker from "The Leech" to "Action," as a tribute to his brother.

"Right before my last fight, my brother passed away, and that was his football nickname. So they would call him Bradley "Action" Jackson, so they would just call him that on the intercom every time he would make a tackle and stuff," said Damon during an interview with Tudor Leonte of [Sherdog.com](https://www.sherdog.com).

"I just thought it'd be cool to keep him around with the nickname. I made the switch, and it sounds good. I like it. I'm going to stick with it from here on," he continued.

When questioned more about the circumstances behind Bradley's passing, Damon says they are still looking for answers.

He revealed that his brother was vaccinated two weeks before his sudden passing. He believed the vaccine might have been a factor in his brother's death.

"We still really don't know. He wasn't answering calls and texts, so we went over to check on him, and we found him in his house. It didn't make a lot of sense yet."

"We did try to figure it out. It could have been a vaccine, it could have been medication, it could have been a handful of things. There's no present, like, apparent reason why it happened. It was just out of nowhere. He was 37 years old, so just doesn't make a lot of sense," he added.

"He was vaccinated just shortly before that, about two weeks before, but I don't want to get into conspiracies and all that kind of stuff. Nothing adds up. So we're trying to figure out some answers, but we don't have any answers so far," he continued.

Heartbreak as Former College Tennis Player Dies from Massive Heart Attack: 'Heaven Gained Another Angel'

By John McCann February 8, 2023

Family members have been left stunned and devastated after a 31-year-old former college tennis star passed away from a sudden heart attack.

Lilly Kimbell, a 2014 graduate of the University of Georgia, died on Sunday after a massive heart attack cut off the oxygen to her brain for an extended period.

According to [Clayton News Daily](#), Kimbell's family was forced to make the heart-wrenching decision to take her off life support.

Family, friends, and former coaches were quick to offer their condolences in the wake of this unimaginable tragedy.

"We were stunned and heartbroken to learn of Lilly passing away," lamented Georgia women's tennis coach Jeff Wallace.

"I will always remember how she helped create a culture of excellence with her attitude and work ethic. Lilly was a fantastic teammate and was always smiling and laughing during practice and matches.

"She ranks as one of the most successful doubles players in Georgia tennis history. During the spring of her sophomore year, she went undefeated in doubles with Maho (Kowase), and their 22-match winning streak is still a school record. Our thoughts and prayers go out to her family," Wallace continued.

As mentioned by Wallace, Kimbell enjoyed quite a college tennis career.

The Texas native registered 197 wins, in both solo and doubles competitions and was an SEC All-Tournament team member in 2012 and 2014, as reported by Clayton News.

Kimbell's heart attack has been linked to a kidney condition that she and her family seemed unaware of, making a passing a tragic surprise.

In a heartfelt [Facebook post](#), Kimbell's sister Samantha Gillas paid homage to her sibling and what she meant to her.

"Yesterday heaven gained another angel," Gillas began.

"I really don't know what to say. I am lost for words and in complete shock, but at the same time I have so much I could say. It all seems so surreal and I'm just waiting to wake up from this bad dream and I'll see you coming downstairs."

"Besides what you did on the court I looked up to you as a person. You had this ability to make everyone smile. Whenever we walked into the room you would be surrounded by people laughing and smiling. Everyone seemed to gravitate towards you," Gillas remembered fondly.

"I'm still trying to process why God had this happen to you at 31 years old. I shouldn't had to say goodbye to my sister at 22 years old. I love you so much Lilly. I know you're looking down at us watching over."

"You were so talented and loved by so many."

25-Year-Old Goalkeeper Dies Suddenly Right After Stopping a Penalty Kick

By Jim Hoft Feb. 11, 2023

Arne Espeel has been the goalkeeper of Winkel Sport B for years. © VDB

A 25-year-old goalkeeper died suddenly during a football match in West Flanders, Belgium on Saturday evening.

Arne Espeel, a goalkeeper of the Winkel Sport B, has died on the spot after stopping a penalty kick in the second half of the match.

According to a local news outlet **VRT**, the young goalkeeper of Sint-Eloois-Winkel stopped the penalty kick, but he then collapsed.

"The ball was still in play," assistant coach Stefaan Dewerchin of Winkel Sport B said. "Our goalkeeper got up as quickly as possible to get the ball, but he fell down afterwards. It was really terrible to see."

The game was immediately stopped.

The emergency services quickly arrived on site and tried to revive the 25-year-old goalkeeper for half an hour.

Espeel was then rushed to the hospital, but he was later declared dead on arrival.

"The players all showered together after the incident and then we sat down in the canteen," says Dewerchin. "When the message came that our goalkeeper had died, what an unusually hard blow. I think some players do not yet realize what exactly happened."

No details have been released yet on the cause of death. An autopsy will be conducted on Monday, according to VRT.

More from local news **Nieuwsblad**:

[Translation]The disbelief is great and the sadness immense at the West Flemish amateur club Winkel Sint-Eloois. The club plays in the first national but also has a B team in the second provincial. All young friends from the municipality who have been playing together since childhood. On Saturday evening, the team received Westrozebeke at 6 PM. After 45 minutes the score was 2-1 and after fifteen minutes into the second half there was a penalty for the visitors. Home goalkeeper Arne Espeel stopped Mohammed El Baghdadi's penalty kick and shouted yes when he suddenly went down again. He was shaking and no one quite knew what was happening. When Espeel remained lying down, the seriousness of the situation was seen and the first care was given to him. The emergency services also arrived on site and did everything possible with, among other things, a defibrillator, but the help was to no avail.

His younger brother Aaron (20) sat back on the bench for the first time in weeks after an injury and saw everything happen before his eyes.

"This is a disaster and a shock to everyone," said Patrick Rotsaert, sports manager of Winkel.

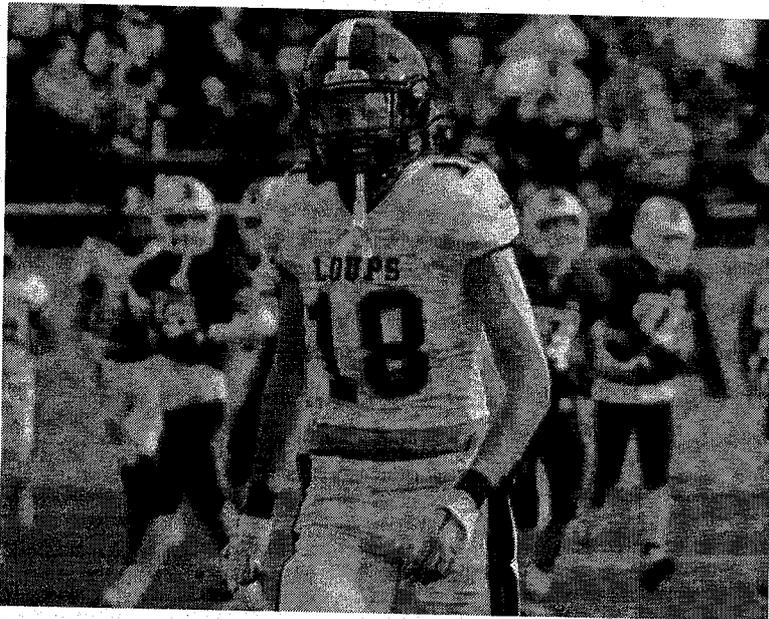

"Arne had been with the club all his life and was very loved. He was a wonderfully sympathetic boy, always in a good mood and willing to help. This is really a heavy blow. First of all for his family and also our entire club."

Naturally, the match was stopped.

TRAGIC: 17-Year-Old Football Player Dies Suddenly In His Sleep Following A "Cardiac Arrest"

By Cullen Linebarger Feb. 13, 2023

The disturbing global trend involving young individuals passing away without warning continues.

Last week in Laval, Quebec, Canada, a 17-year-old football player named William Caron-Cabrera died reportedly following a "cardiac arrest." He was a **student** at Curé-Antoine-Labelle High School.

The official cause of Caron-Cabrera's "cardiac arrest" activity and subsequent death is unknown at this time. A full autopsy has yet to be performed.

Here is the **story** from the *Courier Laval* (story **translated** by Dr. William Makis, MD):

The Wolves of Curé-Antoine-Labelle high school are in mourning. They announced the death of their player William Caron-Cabrera earlier in the week of February 6.

26.2

He was in secondary five and was to continue his sporting career with the Campus Notre-Dame-de-Foy (CNDF) at the college level. The defensive back also worked for the Quebec teams and the Laval-Nord Vikings.

"It is with sadness that we learned of the death of one of our own, can we read on the Facebook page of the Laval team. William [...] had just completed his fifth season with the Wolves. Our deepest thoughts go out to his family and loved ones."

According to information issued by the Laval Police Department, he died in his sleep following a cardiac arrest. The cause would be neither suspicious, in any way criminal, nor due to a suicide.

Appreciated person

Several organizations and relatives of the 17-year-old athlete reacted to the death.

"William was a quality athlete, everyone's friend, always there to make us laugh and his departure will leave a great void in our big family of Handball Laval, can we read on the Facebook page of this same organization of the Jesus Island. Will, take care of your gang of buddies and rest in peace."

"William Caron-Cabrera was a talented, passionate, playful and smiling player who we were blessed to count among [our] big family", adds the Flag-Football Terrebonne club. It is with heavy hearts that we learn of his passing today. He was able to make a positive impression on people throughout his too short life.

Hopefully Caron-Cabrera's family will receive the full reason for his sudden passing. Too many families of these young people has never received closure.

Florida House Rep Blames Covid Vax after Good Friend 'Died Suddenly'

by Adan Salazar - February 14, 2023

Florida state House Rep. Dr. Joel Rudman (R) took to Twitter to sound the alarm on experimental mRNA Covid injection that's possibly behind spate of unexpected deaths.

A Florida legislator suggests the Covid vaccine could be behind his longtime friend's sudden death.

Florida state House Rep. Dr. Joel Rudman (R) on Monday took to Twitter relaying news of his close friend's unexpected passing.

"Just found out an old good friend of mine who's roughly my age had passed away this weekend – another victim of sudden cardiac death," Rudman reported.

"It seems like we're hearing these reports all too commonly nowadays. I can tell you as a physician prior to 2020 I had maybe one patient total who just dropped dead suddenly," Rudman said, "It's a very rare thing to have happen."

"Here in the last year or two, it seems that we've heard dozens of these stories among people that we know, friends of ours. So, something is going on. The numbers are terribly skewed here as of late."

Rudman went on to suggest the experimental mRNA Covid injection could be responsible for the "exponential rise" in unexpected cardiac deaths, and urged people to investigate possible links.

"We are seeing an exponential rise specifically in sudden cardiac death and something's gotta be causing it. You probably can take a guess as to what has changed in the last year or two," Rudman said.

"I think it's high time that we take these seriously and we look into what's going on among our American citizens, because something is causing a drastic increase in sudden cardiac death and we need to find out why."

The doctor's powerful testimony comes as a shock poll taken by Rasmussen found **one in four Americans claim they personally know someone who has died from the experimental Covid shots.**

12-Year-Old Football Player Dies Suddenly After Collapsing on the Field During Practice

By Jim Hoft February 17, 2023

Elijah Jordan Brown-Garcia died after collapsing at football practice on Friday, February 10. He just turned 12 two months ago.

Elijah's family is still looking for answers to what happened.

According to NBC New York, the tragic event took place in Newark at a youth team's training while Elijah Jordan Brown-Garcia was doing two of the things he loved most: spending time with his younger brother and getting ready for football practice.

Elijah played for the Essex County Predators, a team owned by Bloomfield-based Big 21.

With the season still months away, Elijah was practicing football at West Side Park together with his 10-year-old brother Mekhi.

Without warning, Elijah passed out. Mekhi immediately contacted his mom, and another parent dialed 911, but no one performed CPR. The coach was running errands when the incident happened.

"He didn't get hit, like no contact or anything. He ran about 20 yards, said he was going to take a little break. I don't think he took enough time," said brother Mekhi Stradford.

Raven Brown, his mother, was shocked by the incident because her son had no history of health issues, [News 12 reported](#).

"No contact. It was just drills running back and forth. He didn't get hit," Brown says. "He was a healthy kid...I don't know why Friday night was his day."

Brown said that her 10-year-old son Mekhi called to tell her that Elijah had suddenly collapsed and was no longer responsive.

Brown claims she arrived at the location before the ambulance did. She claimed it took two calls from those on the field and a third from her before an ambulance arrived.

"I beat the ambulance there," Brown says. "Like 30-40 minutes. It took them a long time."

Elijah was taken to University Hospital where he later died.

No details have been released on the cause of death.

His mom [informed](#) RLS Media that an autopsy will be performed by the state regional medical examiner's office.
