

## Teachers Are Being Decimated by Aggressive and Metastatic Cancers After COVID-19 Vaccine Mandates

September 7, 2023 Dr. William Makis

Dr. William Makis presents 34 recent tragic cases in the United States.

1. Aug. 21, 2023 - Loveland, CO - Emma who is a young teacher and soccer coach was attending a game, when she received a soccer ball kick to the head, had a seizure and was found to have a brain tumor
2. Aug.15, 2023 - Allentown, PA - Julia Dweck, a teacher, fell ill with a series of blood clots, strokes and was found to have Stage 4 pancreatic cancer
3. Aug.4, 2023 - Woodbridge, VA - 45 year old Cristin Lee Kline, died August 14, 2023 at Inova Fairfax Hospital. She was a school teacher with Prince William County Schools.
4. Cristin Goree (Kline) – died of cancer and leaves behind 6 children.
5. Aug.3, 2023 - Cape Coral, FL - Julia Ringenberger McKinnon, Gulf Elementary School teacher, died after a 2 months battle with Stage 4 Gallbladder cancer
6. Aug.1, 2023 - Boyce, LA - John Upton turned 30 years old, the next day he was found to have a brain tumor, Grade 4 astrocytoma, IDH mutant.
7. July 30, 2023 - Miami, FL - 37 year old non-smoker Christina Pakowitz is a 3rd grade teacher who was diagnosed with lung cancer
8. July 29, 2023 - Milton, FL - 52 year old Janeire Brown is a Milton High School teacher who was diagnosed with Multiple Myeloma.
9. July 25, 2023 - Santa Barbara, CA - 29 year old Tahnia Mark, is a devoted biology and math teacher at La Cuesta Continuation High School. She was diagnosed with Hodgkin's Lymphoma.
10. July 23, 2023 - Alexandria, VA - Nikki Reed is an art teacher and a mom of a 5 year old and a 6 month old baby. She was just diagnosed with a glioblastoma brain tumor and a chest mass.
11. July 21, 2023 - Spearville, KS - Destiny Barnett was diagnosed with Stage 3 Lymphoma that spread to the spleen. She has 2 babies, 21 and 3 months old

1-2

12. July 20, 2023 - Norwich, CT - 27 year old Jordyn Brooks, who is a dancer and a teacher, was diagnosed with aggressive cervical cancer.
13. July 20, 2023 - Harmony, PA - Cheri Mihalik is a teacher of English at Seneca Valley, who was recently diagnosed with Stage 4 Colon cancer
14. July 19, 2023 - Nashville, TN - Amy Nocton, High School Teacher, was just diagnosed with triple negative breast cancer.
15. July 18, 2023 - Athens, GA - Vickie Shell, is graduate of UGA and Georgia State, a member of the Delta Sigma Theta Sorority, and a teacher. She was just diagnosed with brain cancer, glioblastoma.
16. July 15, 2023 - Huntsville, TX - Nique Barnett, who worked with children, was forced to quit her job after she was diagnosed with AML (Acute Myeloid Leukemia). She will be treated at MD Anderson.
17. July 12, 2023 - Elton, MD - Dominick Massimiano is a 9th grade Health and gym class teacher, who was just diagnosed with Non-Hodgkin Lymphoma of his neck. He just had a baby born in Nov.2022.
18. July 3, 2023 - Table Grove, IL - 34 year old Kirsta Anderson, a teacher, was diagnosed with Stage 4 colon and liver cancer:
19. July 2, 2023 - San Jose, CA - Mitzy Romero is a Behavioral Analyst and works with children who have special needs such as Autism Spectrum Disorder, ADHD, Down Syndrome. She was diagnosed with Stage 4 Non-Hodgkin's Lymphoma.
20. June 28, 2023 - Boca Raton, FL - Jamie Sabeeney is a Lynn University senior, studying Early Childhood Education and will begin graduate school in May 2023. She was just diagnosed with Hodgkin Lymphoma
21. June 8, 2023 - San Diego, CA - Meredith is a preschool teacher in San Diego who was just diagnosed with Stage IV Colon Cancer & Liver Cancer.
22. June 6, 2023 - Cincinnati, OH - Jeff Clark, Indian Hill High School teacher died on June 6, 2023. He was diagnosed with Stage 4 colon cancer on May 19; "loved ones described the cancer as "extremely fast growing".
23. June 4, 2023 - Dover, NH - Erica Rosenson is a special education preschool teacher. She was diagnosed with a very rare brain tumor - Grade 3 infiltrating glioma.

24. June 1, 2023 - Santa Maria, CA - Jodi Maquinaldez worked at Santa Barbara County Education Office for 23 years working with special needs kids, until recently when she was diagnosed with pancreatic cancer.
25. June 1, 2023 - Missoula, MT - Michelle Lodato was working in a kindergarten classroom and teaching piano. She was also in pursuit of a Master's in Education from Eastern Washington University. She was diagnosed with 2 cancers - thyroid cancer and Hodgkin Lymphoma.
26. May 31, 2023 - Philadelphia, PA - Jessica Leichtweisz, a teacher for children with autism, was diagnosed with a high grade, malignant brain tumor.
27. May 19, 2023 - Longview, TX - 32 Year old Jarrett Van Curen is the lead Ag Science Teacher at Big Sandy ISD. On May 15 he had a seizure and was found to have a brain tumor that he was told is terminal.
28. May 15, 2023 - Schenectady, NY - Ashley Armer is a music teacher at Central Park Middle School, and had a baby in October 2022. In Feb.2023 she was diagnosed with Stage 3 Colon Cancer.
29. May 12, 2023, Decherd, TN - Chris Fowler is a teacher and defensive line coach for the football team at Jackson County High school. He was diagnosed with Hodgkin's Lymphoma.
30. May 12, 2023 - Watford City, ND - Rachel Meuchel is a school counselor at Watford City High School. She was just diagnosed with Grade 4 Astrocytoma brain tumor. Leaves behind four small boys.
31. April 29, 2023 - Silsbee, TX - Cindy Lindsey, a 3rd grade teacher, was just diagnosed with Hodgkin's Lymphoma.
32. April 25, 2023 - Austin, TX - Lori Chester, a music teacher, was diagnosed with Stage 4 Diffuse Large B-Cell Lymphoma.
33. April 24, 2023 - East Wenatchee, WA, Jessica Morlan, music teacher and mom of 5, died after a 9 month battle with Stage 3 T-Cell Lymphoma.
34. April 11, 2023 - Washington DC - Grace Lim is a public school teacher who was diagnosed with triple negative breast cancer.

1-4

4-5

35. March 20, 2023 - Scottsdale, AZ - 54 year old Lisa Domini, kindergarten teacher at Hopi Elementary School, died after a 5 month battle with Stage 4 Bile duct cancer (cholangiocarcinoma).

### My Take...

Special thanks to Twitter user Janiesaysay, for finding many of these tragic cases.

This is just a sample of the tsunami of aggressive (often Stage 4) cancers that are decimating teachers in the USA, who faced COVID-19 mRNA vaccine mandates in 2021 and 2022.

In this sample, this is how the cancers break down:

- lymphoma - 10
- brain cancer - 8
- colon cancer - 5
- pancreas, hepatobiliary, breast (both triple negative) - 2 each
- lung, cervix, thyroid, leukemia, multiple myeloma - 1 each

In my previous substack about Turbo Cancer in nurses, the top 3 were: lymphoma (6), colon cancer (6) and breast cancer (5).

Pfizer & Moderna COVID-19 mRNA vaccines can cause (through damage to the immune system) aggressive turbo cancers which often present at a late stage (usually stage 3 or 4), grow very rapidly, spread or metastasize rapidly and are generally resistant to conventional cancer treatments (chemo, radiation).

**CONCLUSION:** It is shocking to see so many young teachers come down with such aggressive end stage cancers.

Oncologists cannot continue to ignore this new phenomenon of COVID-19 mRNA Vaccine Induced Turbo Cancer, forever.

There are definite patterns emerging here.

Lymphoma is clearly a big problem in the COVID-19 vaccinated.

But it's not just lymphoma - look at breast and colon cancers.

Why is breast cancer in the COVID-19 vaccinated usually triple negative?

Why is colon cancer in the COVID-19 vaccinated so aggressively metastatic?

Why so many aggressive and inoperable brain tumors?

Look for these patterns in ALL COVID-19 mRNA vaccine mandated professions - doctors, nurses, teachers, police, firefighters, military, government workers, etc.

## **A Cry for Answers: Shawna Caines' Struggle with Covid 'Vaccine' Side Effects (Video)**

June 6, 2023

In a powerful, heartfelt testimony at the National Citizens Inquiry hearings in Ottawa, Canada, Shawna Caines bravely shares her harrowing experience with the Covid-19 vaccine. Her story sheds light on the struggles those suffering adverse effects faced after receiving the vaccine, emphasizing the need for transparency, accountability, and better support for individuals impacted by such events.

### **An Informed Decision**

Shawna Caines' journey began with hesitation and extensive research. She consulted doctors, psychologists, and numerous individuals before making the difficult decision to receive the vaccine. Obligated by her workplace, Shawna had concerns about the testing requirements and the potential costs involved. Despite her reservations, she opted for the Pfizer vaccine, hoping it would provide the best protection.

### **The Unexpected Consequences**

Just two days after her second dose, Shawna experienced a range of alarming symptoms: a swollen knee, difficulty walking, a swollen pinky finger, heart attack-like sensations, and numbness and tingling in her left arm. Frightened and in excruciating pain, she embarked on a journey of medical tests and consultations, hoping for answers and relief. Sadly, medical professionals could not determine the cause of her symptoms or provide a resolution.

### **The Medical System's Letdown**

Shawna's disappointment with the medical system became increasingly evident throughout her testimony. She expressed frustration at being dismissed and told that her symptoms were psychological or self-manifested due to vaccine hype. The lack of accountability from her employer, doctors, the government, and even the pharmaceutical company Pfizer left her feeling betrayed and abandoned. Shawna's plea for answers and support fell on deaf ears, exacerbating her physical and emotional distress.

### **Impact on Daily Life**

Shawna, once an energetic go-getter, now finds herself physically restricted and constantly fatigued. Engaging in activities she previously enjoyed, such as skydiving and whitewater rafting, is now uncertain due to her debilitating symptoms. She questions the fairness of her situation, as she took the vaccine to protect the community despite being at low risk herself. Shockingly, Shawna contracted COVID-19 twice after vaccination, experiencing more severe symptoms than her unvaccinated family members.

### **Unsatisfactory Responses**

The responses Shawna received from the medical community only deepened her disappointment. She was repeatedly offered medication, including sleeping pills, as a means of managing her pain and discomfort. However, Shawna refuses to rely on drugs for the rest of her life and yearns for a resolution that addresses the root cause of her suffering. Her quest for answers led her to seek alternative avenues of healthcare, including consultations with a naturopathic doctor.

### **Inadequate Information and Informed Consent**

Shawna believes that she was not adequately informed about the potential risks associated with the vaccine. Conversations with medical professionals failed to address her concerns regarding strokes, which run in her family. Additionally, she was not provided with any disclosure or paperwork regarding the potential side effects before receiving the vaccine. The lack of informed consent left Shawna feeling coerced into a decision that profoundly impacted her life.

**Moving Forward**

Shawna's immediate plans involve seeking assistance from a naturopathic doctor, hoping to find answers and healing outside the realm of conventional medicine. Her resilience and determination to move forward are driven by the love for her family and the desire to regain her health. Despite the challenges she has faced, Shawna recognizes the importance of sharing her story, highlighting the suppression she has encountered on social media platforms and the collective need to address the adverse effects experienced by numerous individuals.

**Catalyst for Change**

Shawna's testimony serves as another wake-up call for governments and leaders to reevaluate their approach to vaccine safety and post-vaccination support. Her story emphasizes the necessity for transparency, accountability, and comprehensive information dissemination. It is crucial that individuals like Shawna, who have experienced adverse effects, are heard, acknowledged, and provided with the necessary medical care and support.

Shawna's call for a more compassionate and responsible medical system resonates with the countless individuals silently suffering in the aftermath of vaccination. Her testimony should serve as a catalyst for change, prompting rigorous research, enhanced transparency, and improved post-vaccination support systems.

# More Than 100 Young Children Suffered Seizures After COVID Vaccination: Study

JUNE 10, 2023 Zachary Stieber

**More than 100 young children suffered seizures after receiving a COVID-19 vaccine, according to a new study.**

One hundred and four children under 6 years old suffered a seizure within 42 days of a COVID-19 shot, researchers with the U.S. Centers for Disease Control and Prevention (CDC) and other institutions found.

**Others suffered strokes, blood clotting disorders, and appendicitis, the researchers said.**

They analyzed health records from the Vaccine Safety Datalink, a CDC-funded network that features sites operated by Kaiser Permanente, Marshfield Clinic, Health Partners, and Denver Health.

The researchers examined events that fit one or more of 23 prespecified outcomes, including seizures and myocarditis, a form of heart inflammation, following messenger RNA COVID-19 vaccination.

**The Pfizer and Moderna COVID-19 vaccines both utilize messenger RNA technology.**

Children were studied if they received a vaccine dose from June 18, 2022, to March 18, 2023; 247,011 doses were administered to children under 6 during that time. Researchers examined the events that occurred within 42 days of vaccination.

The U.S. Food and Drug Administration first authorized Pfizer's vaccine for children younger than five and Moderna's vaccine for children younger than six on June 17, 2022, despite efficacy estimates against infection being substandard or unreliable and there being no or negative evidence of protection against severe disease. The study was published by Pediatrics, the American Academy of Pediatrics journal, on June 6.

## Type of Analysis

Eric Weintraub of the CDC and the other researchers for the new study conducted a type of examination called rapid cycle analysis. It involves comparing outcomes among the vaccinated within 21 days of a shot with outcomes among the vaccinated between 22 and 42 days of a shot. Events on the same day as vaccination were excluded.

**The first window of time—1 to 21 days—is described as the “primary risk interval,”** or the most likely period of time for the vaccinated to suffer adverse events. The latter time period was deemed a comparison interval. The idea for the events that occur in the latter period is that “it’s too late for them to be associated with a vaccine,” Dr. William Schaffner, a professor of preventative medicine at Vanderbilt University who was not involved in the study but who has worked closely with the CDC, told The Epoch Times.

The researchers did not compare the vaccinated with the unvaccinated, despite indicating they would do so in the protocol ([pdf](#)) for Vaccine Safety Datalink monitoring. They have in some other studies. A request for comment to the corresponding author returned with an away message, and another author did not respond to an inquiry.

**The researchers reviewed medical records for each case identified in either of the intervals, and also calculated rates to see whether any were more common in the earlier window.**

## What They Found

In absolute terms, researchers found a number of serious problems after vaccination, including the seizures. The following events were detected in at least one young child one to 42 days following vaccination:

3-2

- Appendicitis
- Bell's Palsy
- Encephalitis, myelitis, or encephalomyelitis
- Guillain-Barre syndrome
- Immune thrombocytopenia
- Kawasaki disease
- Pulmonary embolism
- Stroke, hemorrhagic
- Transverse myelitis
- Venous thromboembolism

The numbers were also higher in the initial window of time for some outcomes.

In the first 21 days, for instance, 38 Pfizer recipients experienced seizures and 23 Moderna recipients experienced seizures. In the second window, 24 Pfizer recipients experienced seizures and 19 Moderna recipients experienced seizures.

## Former Georgia football player dies suddenly at 34

JAMES PARKS JUNE 12, 2023

The Georgia football family is mourning the loss of former Bulldogs linebacker Akeem Hebron, who died unexpectedly over the weekend, as several of his friends and the football program all confirmed. "Our hearts are heavy as we mourn the loss of a beloved member of the Bulldog family, Akeem Hebron," Georgia football said in a statement.

"His dedication to Georgia Football will always be remembered. We send out deepest condolences to his family and loved ones during this difficult time."

Hebron was a member of the 2006 football recruiting class for Georgia and ultimately played in 16 games for the Bulldogs during the seasons from 2008 to 2010, recording 10 stops with seven assists, including two for a loss in his senior campaign, in which he also recorded the one sack in his collegiate career.

Georgia went 24-15 during Hebron's career and won two bowl games, earning a No. 1 position in the top 25 rankings to start the 2008 campaign, finishing at No. 13 in the AP poll with a 10-3 mark and win in the Citrus Bowl.

Hebron was suspended briefly during his Georgia career, but bounced back and eventually graduated from the university with a degree in a personal turnaround that caught the attention of former Bulldogs head coach Mark Richt.

"A good thing happened to Georgia and to him," Richt said.

"The greatest thing, I think, that's happened to him is that he's grown into a man. That's one of the biggest things that college is all about. He's a good man, and he's proved that, and I'm really proud of him."

## Pro Basketball Player's Fatal Heart Attack Post Forced COVID Vaccine Concern

Luis Cornelio June 24, 2023

(Luis Cornelio, Headline USA) Professional basketball player Óscar Cabrera Adames, who had previously voiced grave concerns about the COVID-19 vaccine, passed away this week after suffering a fatal heart attack, Fox News reported on Saturday.

Sports commentator Héctor Gómez took to Instagram to announce the tragic news, stating that the 28-year-old Dominican athlete died while undergoing an endurance test at a health clinic in the Dominican Republic.

According to Fox, experts believe that Adames had been afflicted with myocarditis, a condition that weakens the heart and its electrical system.

Adames's untimely demise followed his claims of being diagnosed with myocarditis subsequent to a government-mandated COVID vaccine.

In a Spanish-language post on social media, Adames lamented, **"I got damn Myocarditis from taking a f—ing vaccine. (I got 2 doses of Pfizer) And I knew it! Many people warned me."**

The professional basketball player expressed his discontent with the vaccine requirement for his work, stating, "But guess what? It was compulsory or I couldn't work. I am an international professional athlete and I am playing in Spain."

According to Fox, Adames added, "I have no health problem, nothing, not hereditary, no asthma, NOTHING! I suddenly collapsed to the ground in the middle of a match and almost died. I'm still recovering and I've had 11 different cardiology tests done and guess? They find nothing."

Gómez, a popular sports commentator in the Caribbean country, revealed that Adames was the nephew of Hugo Cabrera, a beloved basketball player and esteemed figure in the Dominican Republic.

Adames's death comes days after CDC Director Rochelle Walensky and the Biden administration came under fire for pushing COVID vaccines despite knowing that they were not effective in preventing the spread of the Chinese-originated virus.

A YouTube channel, apparently owned by Adames himself, shows his skills in Basketball.

It remains unclear whether local authorities will investigate the sudden death of Adames.

## Fans and Competitors Shocked as WWE Wrestling Star Dies "Unexpectedly" at Age 36

Cullen Linebarger Aug. 24, 2023

Another athlete has passed away far too soon out of nowhere, bringing shock and sadness to fans and fellow athletes alike.

Bray Wyatt, a star professional wrestler in the WWE, died **unexpectedly** on Thursday. Paul "Triple H" Levesque, the head of creative for the WWE announced the sad news Thursday on X (formerly Twitter):

Just received a call from WWE Hall of Famer Mike Rotunda who informed us of the tragic news that our WWE family member for life Windham Rotunda – also known as Bray Wyatt – unexpectedly passed earlier today. Our thoughts are with his family and we ask that everyone respect their privacy at this time.

The New York Post notes that Wyatt held the WWE championship once and the promotion's Universal championship twice. He was also part of two tag-team championship teams.

Wyatt's cause of death is unknown at this time. The Post reported that Wyatt had been battling an unnamed "life-threatening illness" earlier this year but was approaching a return to the WWE. No autopsy has been scheduled as of this writing.

2023

## Student Pilot Suffers Cardiac Arrest During Training Flight at Fort Novosel

Jim Hoft Aug. 24, 2023

A shocking incident occurred on Friday, August 18, when a student pilot went into cardiac arrest during a training flight at Fort Novosel. Despite the serious nature of the event, military officials have stated that an investigation will not be conducted.

Military watchdog site [TRMLX](#) reported that a student pilot who was engaged in an NOE (Nap of the earth) flight, a low altitude maneuver used by military aircraft to avoid enemy detection, suffered from cardiac arrest on August 18.

During the flight, the pilot suddenly slumped over the controls. A second student pilot quickly reacted, pulling him off the controls, while the IP (Instructor Pilot) safely landed the aircraft.

Emergency measures were immediately initiated, with the second student performing CPR and the IP performing an emergency shutdown. Paramedics swiftly took over, and the student was medevacked to the hospital in Dothan, resuscitated en route with a defibrillator.

According to the news outlet, the incident will likely not be investigated because "it's being labeled as a medical event and not a "precautionary landing."

More from [TRMLX](#):

I think we all have the same suspicions. If you've been living on planet earth in the last two years and aren't aware of the abnormal amount of [young Americans dropping dead](#), then you're one of the fortunate ones who's managed to insulate themselves from literally every external media source available. You may still be in denial about it being attributed to the COVID vaccine, and you may even be stupid enough to [pin it on climate change](#), but you're aware that deaths are increasing nonetheless.

Therein lies the next issue. Students in the basic course, along with those in WOAC (Warrant Officer Advanced Course), are being told this was a **medical event** and nothing more. In fact, students in the basic course being debriefed on what happened were told the student pilot "became unconscious" and have not officially been told it was attributed to a cardiac arrest. One of the students who messaged said they had a brief safety stand down while praising the Army's new emergency response procedure and told me "there's no real news or tragedy to report." Every message from a student included the words "unresponsive" or unconscious" but nothing about a heart attack or cardiac arrest. One of the DACs (civilian) told me "we got a brief today; they aren't saying heart attack, but he lost consciousness and was air medevac'd to Dothan."

Instructors and cadre told a different story, however. One member of cadre told me, "yes, a student in Common Core had a heart attack. Yes, he was revived after 11 minutes." A couple of other messages echoed this statement. Then I spoke to a member of the medical response team. This person told me from start to finish, the student was gone for a total of 18 minutes. He was, indeed, revived with a defibrillator, and he factually went into cardiac arrest. This person flat out said he was dead and brought back to life.

The students are not being told accurate details, while the chain of command is refusing to investigate it based on it being a medical event not related to the aircraft. The students should know what took place in that cockpit. EVERYONE should know what happened in the cockpit. The military recently admitted that [myocarditis has spiked](#) after the COVID vaccine was mandated. This is not new information to anyone who follows us, as we've [shown proof](#) of this for a year and a half now. These events shouldn't be brushed over or swept under the rug, but the DOD's official stance is that the vaccine is "[safe and effective](#)," therefore don't ask questions and just

7-2

4-01

get it. Covering it vaccine related events is not a coordinated event; it's an ideology. Flag officers know exactly what to do when this stuff happens, and they carry out their purpose with swift resolve.

Dr. William Makis wrote on X:

US Army Aviation Center student pilot went into cardiac arrest behind the controls midflight (Aug.18, 2023)  
Instructor landed plane safely – pilot was dead for 18 minutes!

This is the 6th pilot incapacitation in 2 weeks, 3 pilots dead:

Aug.17, 2023 – IndiGo Flight (NAG-PNQ) Nagpur to Pune, India, pilot 40 year old Manoj Subramaniam died after collapsing at the boarding gate

Aug.16, 2023 – Qatar Airways Flight QR579 (DEL-DOH) Delhi to Doha, Qatar, 51 year old pilot collapsed as a passenger inflight and died

Aug.14, 2023 – LATAM Flight LA505 (MIA-SCL) Miami to Santiago, Chile – 2 hours into 8hr flight, 56 year old Captain Ivan Andaur collapsed and died in the lavatory – plane diverted to Panama City!

Aug.9, 2023 – United Airlines UAL1309 (SRQ-EWR) Sarasota to Newark, pilot had a heart attack and lost consciousness in flight

Aug.7, 2023 – TigerAIR Flight IT237 (CTS-TPE) Sapporo to Taipei, copilot had a medical emergency after landing plane in Taipei

## College Basketball Star Dies at Age 23, Days Before He Was Supposed to Begin His Professional Career

Johnathan Jones August 22, 2023

A former college basketball standout has died at the age of 23 just days before he was set to embark on a professional career, according to numerous reports.

Reggie Chaney, who finished a productive career at the University of Houston this past season — in which he was named the 2022-23 AAC Sixth Man of the Year — reportedly died suddenly but no cause of death has been announced.

A native of Tulsa, Oklahoma, Chaney attended high school at the Findlay Prep academy in Henderson, Nevada.

After graduation, he played for two seasons for the University of Arkansas. In 2020, the 6'8" forward transferred to Houston.

During the 2022-2023 season, he started one game for the Cougars and played in 35, according to the school.

He averaged three points, 2.7 rebounds and 0.7 steals per game before he graduated. Chaney averaged 4.8 points and 3.4 points per game during two seasons with the Razorbacks as a freshman and sophomore.

Arkansas basketball operations director and former coach Matt Zimmerman expressed sadness at the player's death in comments to Whole Hog Sports.

"It's devastating news," Zimmerman said. "It breaks your heart that he's passed away at such a young age."

Zimmerman concluded, "It seems like yesterday he came on his official visit. I just can't believe he's gone already."

Houston head coach Kelvin Sampson also commented on Chaney in comments to Joseph Duarte with The Houston Chronicle.

"Reggie is like that penny (at the convenience store), when you need him he's there," he said.

Sampson described Chaney as his "security blanket" in comments shared by KHOU. ESPN analyst Jay Bilas said he was "shocked and saddened" to learn of Chaney's death.

According to Whole Hog Sports, Chaney was set to travel to Greece next week where he had signed a contract to play professional basketball.

## “Can’t Comprehend” – Family Shocked as Seemingly Healthy Former Olympic Swimmer Dies Suddenly at Age 43

Cullen Linebarger Aug. 16, 2023

The sports world is mourning the loss of a seemingly healthy former British Olympic athlete who passed away under unknown circumstances.

The Daily Mirror reported that Helen Smart, who represented Team Great Britain as a swimmer in the Olympics before becoming a teacher, died at the age of 43 on Tuesday.

**The cause of Smith’s demise is unknown at this time. Her family described the death as “sudden” and were shocked by her passing.**

Smart’s accolades as an athlete were absolutely sterling. E News notes, she had many notable accomplishments as a swimmer. Smart won the bronze medal at the Commonwealth Games in 1998 and proceeded to take home silver medals at the World and European Championships. She then qualified for the 2000 Summer Olympics in Sydney, Australia and finished 15th in 200m backstroke event.

At the time of her passing, Helen was working as the head school principal at Worsley Mesnes Community Primary School in Wigan.

According to the Daily Mail, Helen’s family were at a large cottage on the banks of Lake Coniston at the time of her passing. Helen was found unresponsive in her bed Tuesday morning at 4 AM by her four-year-old daughter Heidi.

She then then ran to Craig Smart, her father and Helen’s husband and told him “Daddy, I can’t wake mummy up.” When Linda, Helen’s mother, went to check and knew she was gone after touching her.

I touched her foot and she was cold. I walked round and to the side of her and she looked asleep but you could tell she was gone.

Linda explained that her daughter had never been sick and that the entire family was in shock:

**We are just in so much shock. You jump from believing it to not believing it.**

**She had been paddle boarding a few hours before and had never even been ill apart from her knees swelling from swimming.**

11-1

## Caleb White, 17-year-old No. 3 high school basketball player in Alabama, dies after collapsing on court

Katherine Donlevy Aug. 11, 2023

The No. 3 high school basketball player in Alabama died Thursday after collapsing on the court while playing the game he loved. Pinson Valley High School senior Caleb White, 17, became ill around 1:15 p.m. while training with his teammates, according to his grandfather.

He suddenly dropped to the ground and was rushed to the hospital, but doctors couldn't revive him, George Varnadoe Jr. [said on Facebook](#).

"At 17, he was dead!!!!" Varnadoe wrote, adding that his grandson was an "honor student, very respectful, high intellect, excellent role model, phenomenal basketball player."

"Our whole family was really looking forward to his upcoming senior season and afterwards, playing for a D-1 school and then perhaps the NBA. But.....it wasn't meant to be," the grieving grandfather added.

"You see, everything that happens, happens on time, because God wouldn't allow it to happen, if it wasn't on time. And so it was with Caleb. We all have an appointment with God, one that you can't reschedule."

Varnadoe said his grandson suffered cardiac arrest, but the Jefferson County Coroner has yet to determine a ruling, [AL.com reported](#).

Pinson Valley High School Principal Michael Turner announced White's death in a note sent to parents confirming the student had suffered a "medical emergency" at school before being pronounced dead at the hospital.

The 6-foot tall rising senior was a first-team all-state player for his Pinson Valley team and was one of three finalists for Class 6A player of the year as a junior, according to the Alabama High School Athletic Association.

Caleb was the No. 3 player in the state and No. 43 in the country, [according to rankings by ESPN](#).

He was both a shooting guard and a point guard and was set to serve as the team's captain for his final year at the school.

"Our thoughts and prayers go out to Caleb's family, his classmates and basketball team and extended school family," AHSAA Director Alvin Briggs [said in a statement](#).

"He was an outstanding student-athlete who played in the North-South All-Star Basketball Game last month. He was an outstanding student-athlete and role model."

Caleb is the latest in a string of young athletes to collapse and die during strenuous activity.

Last month, Long Island high school football player [Robert Bush went into cardiac arrest](#) just four minutes after taking the field for summer workout drills.

[A 12-year-old New Jersey boy suffered the same fate](#) in February after dropping during a game of no-contact football.

His family blasted the league running practice for neglect, claiming none of the coaches knew CPR.

## Long Island high school football player Robert Bush taken off life support after collapse: report

Patrick Reilly / July 8, 2023

A Long Island high school football player who collapsed during summer workout drills has been taken off life support, according to his family.

Robert Bush, 17, of Selden, went into cardiac arrest after just four minutes on the field Monday evening at Newfield High School.

His coaches desperately tried to save the teen, performing CPR and shocking him with a defibrillator, before he was rushed to Stony Brook Hospital.

The Bush family said they took Robert off life support on Friday night so his organs could be donated, CBS New York reported. "We're at the beginning of the final stages of my brother," Robert's sibling, Steven Bush, told the outlet. "We haven't said our goodbyes, but that's what we are preparing to do, talk about organ donation."

His teammates were able to visit him at the hospital.

The cause of the high schooler's sudden collapse remains uncertain, however, family members indicated that Robert, who was adopted, may have had an unknown hereditary condition that affected his heart.

The teen had never shown any previous signs of having a heart condition, his family told Newsday.

Bush had joined the football team to improve his health and conditioning, Steven said. While he was not a naturally talented player, he worked hard at his goal to make the varsity squad.

His brother said the family would jokingly refer to him as "Rudy," due to his short height, in reference to the iconic film. "He was always trying to get better and better because he was never a tall guy," his other brother, Chris, said.

Robert was adopted as a baby and was one of 10 siblings — from ages 16 to 56 — in the Bush family. The family had fostered over 300 children, according to Steven Bush.

His mother, Patricia Bush, died of cancer in 2017. His father is currently dealing with severe medical issues that have left the family to fend for themselves, Steven told Newsday.

## 12-year-old New Jersey boy dies during no-contact football practice

Katherine Donlevy Feb. 17, 2023

A 12-year-old New Jersey boy collapsed and died during a no-contact football practice — and his family has blasted the league as “neglectful” because none of the coaches knew CPR.

Elijah Jordan Brown-Garcia, a sixth-grade student at KIPP Rise Academy, was practicing with the Essex County Predators last Friday when he dropped to the ground and became unresponsive, his family told News 12.

“No contact. It was just drills running back and forth. He didn’t get hit,” his mother, Raven Brown, told the outlet. “He was a healthy kid...I don’t know why Friday night was his day.”

Elijah’s 10-year-old brother, who was also at the practice, called their mother to tell her that the coaches — none of whom were CPR-certified — were trying to revive the young player.

“He said, ‘They are pouring water on him, and they are fanning him.’ And that’s when I got my kids together and I said, ‘I’m on my way,’” says Brown.

Brown called an ambulance as she rushed to the field, and coaches also called twice, but Brown made it to her son before emergency personnel.

She said it took 30-40 minutes for the ambulance to arrive. Elijah was rushed to the hospital, where he died. The next day, Elijah’s coach called Brown to apologize.

“Sorry, none of us are CPR-certified,” the coach allegedly told the grieving mother.

New Jersey state law requires at least one person to be CPR-certified at state school events and to have a defibrillator on standby.

“They are neglectful. You can’t run a team like that,” Brown says.

Brown and her family are considering taking legal action against the group that runs the football league, she said. The team acknowledged Elijah’s passing, but didn’t provide a comment to News 12 because of an ongoing investigation.

Officials are still looking into Elijah’s cause of death.

His mother said Elijah had never had any prior health issues and had gone to school earlier in the day without problems. Playing on the football team was his favorite thing to do, his mother said.

## 16-YEAR OLD TEXAS CHEERLEADER SUFFERS CARDIAC ARREST

ALEJANDRO AVILA August 11, 2023

A sudden cardiac arrest took the life of a high school girl, remembered for her exuberance and hard work.

Callie Mitchell, the 16-year-old high schooler entering her junior year, suffered a fatal cardiac arrest at her cheerleading camp, which she attended as of July 24.

The popular Morton Ranch High School (Katy, TX.) cheerleader was at Texas A&M when the medical emergency occurred. Mitchell had to be airlifted to Texas Children's Hospital.

### Tragic Medical Emergency Kills Texas Cheerleader

Despite the coach's CPR, Mitchell died from the sudden attack.

Mitchell's parents also encourage fellow Morton Ranch High School parents to buy EKGs, which monitor signs of a potentially fatal heart disorder.

"For any other parents out there, you know they do physicals every year. ... EKGs are not part of a physical. ... Get an EKG," Scott Donohue said.

Rest in Peace

## Wikipedia Suppresses Basketball Player's Post-Vaccine Blood Clot Troubles

Robert Kogon | Daily Sceptic August 10, 2023

In spring 2021, the American basketball player Brandon Goodwin, then of the Atlanta Hawks, developed severe fatigue and back pain, which would force him to miss that year's NBA playoffs. Several months later, in September, Goodwin revealed in a Twitch stream that he had been diagnosed with blood clots and that his problems began in the immediate aftermath of being vaccinated against COVID-19.

"I was fine... until I took the vaccine," Goodwin said. "I was fine... Yes, the vaccine ended my season, one thousand percent." Astonishingly, however, Brandon Goodwin's post-vaccine troubles with blood clots have been entirely purged from [his Wikipedia entry](#). The current version of his Wikipedia entry simply reads "Goodwin missed the 2021 NBA playoffs due to a respiratory condition", without any source being given.

It was in fact his employer, the Atlanta Hawks, that had announced in May that Goodwin would miss the playoffs due to a "minor" respiratory condition, as reported [by the Associated Press](#). In his September 29th Twitch stream; however, Goodwin revealed not only that he had in fact been suffering from post-vaccine blood clots, but also that a Hawks official called him while in the hospital and told him, "Don't say anything about it, don't tell nobody".

For an account of the episode, see [Megan Redshaw's article at Children's Health Defence](#). The Twitch stream is no longer available, but relevant excerpts have been [preserved by the Daily Caller](#).

Despite back-and-forth among Wikipedia editors about whether blood clots should be described as a 'known', 'rare' or 'common' side effect of COVID-19 vaccines, [as of February 26th 2022](#), Goodwin's Wikipedia entry still included the following passage:

On October 3rd 2021, with his season having ended early, Goodwin reported severe fatigue coupled with extreme back pain, and a formal diagnosis of blood clots followed. Blood clots is a common side-effect connected to COVID-19 vaccination. Goodwin has made public he had received a vaccination shot just prior to his blood clot diagnosis.

By two days later, there was no longer any mention of his blood clots or the vaccine.

A Wikipedia editor attempted to justify an earlier deletion of reference to Goodwin's post-vaccine blood clots by noting that Goodwin had "[recanted](#)" his claims. The term is well chosen.

By the time of his Twitch stream, Goodwin had been let go by the Atlanta Hawks. In an apparent attempt to get back in the good graces of the NBA, on October 14th – the very day he signed a non-guaranteed contract with the New York Knicks and just before the start of the NBA season – Goodwin posted [an exculpatory tweet](#) insisting:

I don't have a story. That wasn't something I wanted to get out there. I got sick. Maybe it was the vaccine maybe it was Covid [I don't know]. I'm not an expert. But I'm fine, and I'm healthy and about to play.

It was presumably also around this time that Goodwin made his Twitch stream private. He is presently out of the league. Have other NBA players likewise been put under pressure to cover up adverse reactions to a COVID-19 vaccine? Well, on the same day that Brandon Goodwin posted his exculpatory tweet, Brooklyn Nets centre Nic Claxton revealed after a pre-season game that he was feeling unwell with what the *New York Post* would later call a "[mystery illness](#)". Claxton would not play again for the next month-and-a-half.

News reports described symptoms of fatigue reminiscent of the problems Goodwin was having earlier in the year. On October 31st, the Brooklyn Nets [announced](#) that Claxton was suffering from an otherwise unspecified "non-Covid-related illness". "Nic is going to be out a little bit," then Net coach Steve Nash explained:

He's not feeling well. Nothing to be concerned with but I don't think he's going to be back in the next week or 10 days. Just an illness, but it's nothing major or nothing we're overly concerned with. It's just a little more severe illness than we thought initially and I think he'll miss a little more time.

Mysterious indeed. "Don't say anything about it, don't tell nobody"?

# Dillon County sheriff collapses and dies unexpectedly in his home Douglas Pernell, 61, worked Monday and didn't seem to have any problems before he collapsed in his home, Dillon County Coroner Donnie Grimsley said.

Associated Press August 8, 2023

DILLON, S.C. — Dillon County Sheriff Douglas "Humbunny" Pernell died suddenly at his home Monday, according to the Dillon County Coroner's office.

Pernell, 61, worked Monday and didn't seem to have any problems before he collapsed in his home, Dillon County Coroner Donnie Grimsley said.

Pernell's deputies and other law enforcement officers escorted the sheriff's body to Myrtle Beach for an autopsy and then back to Dillon County, the sheriff's office said. Myrtle Beach is 60 miles (96.56 kilometers) southeast of Dillon.

Grimsley will review the autopsy results before releasing a cause of death.

Pernell worked in law enforcement for more than 30 years. He was elected Dillon County sheriff in 2020. Under state law, Chief Deputy Larry Abraham will act as sheriff until the governor can appoint a new sheriff leading up to a special election.

## ESPN Director Dies Unexpectedly in Middle of NCAA Tournament

Johnathan Jones June 12, 2023

A longtime ESPN director and a former college baseball player died unexpectedly over the weekend while covering an NCAA tournament.

The network announced on Sunday that Kyle Brown died on Saturday at age 42 during its coverage of the NCAA baseball super regional in Winston Salem, North Carolina.

Brown suffered what ESPN called a “medical emergency” but no other information was made available.

“Kyle Brown died suddenly today,” Williams posted on Saturday. “He was a lead producer for Morning Drive @GolfChannel.”
